CC disease, Parkinson's disease, dementia, short memory and various cancers,
CC as well as for maintaining equilibrium of sense or motor function, and
CC for treating emotional reaction, fear response and panic. Accordingly,
CC they exhibit osteopathic, neuroprotective, nootropic, antiparkinsonian,
CC cytosstatic and tranquiliser activities. This polynucleotide is a full
CC length human cDNA sequence of the invention. NOTE: This sequence is not
CC given in the sequence listing of the specification but can be obtained on
CC CD-ROM from the European Patent Office, Vienna Sub-office.

PS Disclosure; SEQ ID NO 13475; 1701pp + Sequence Listing; English.  
XX  
CC The invention relates to novel genes (ABA1004-ABA21534) and proteins  
CC (ABBI4678-ABBI8001) useful for preventing, treating or ameliorating  
CC medical conditions e.g. by protein or gene therapy. The genes are  
CC isolated from a range of human tissues disclosed in the specification.  
CC The nucleic acids, proteins, antibodies and (ant)agonists are useful in  
CC the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and  
CC ovarian cancer and other cancers of the adrenal gland, bone, bone marrow,  
CC breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune  
CC disorders e.g. Addison's disease, allergies, autoimmune haemolytic  
CC anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease,

```
CC multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c)
CC cardiovascular disorders such as myocardial ischaemias; (d) wound healing
CC ; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f)
CC infectious diseases such as viral, bacterial, fungal and parasitic
CC infections. Note: The sequence data for this patent did not form part of
CC the printed specification, but was obtained in electronic format directly
CC from WIPO at ftp.wipo.int/pub/published_pct_sequences

XX PA  
XX (HUMA-) HUMAN GENOME SCI INC.  
XX PI Rosen CA, Barash SC, Ruben SM;  
XX WPI; 2001-541565/60.  
XX Nucleic acids encoding 3224 human nervous system antigen polypeptides,  
PT useful for preventing, diagnosing and/or treating nervous system cancers  
PT and metastases.  
XX FS Disclosure; SEQ ID NO 13474; 1701pp + Sequence Listing; English.  
XX CC The invention relates to novel genes (AB11004-AB21534) and proteins  
CC (AB114678-AB18001) useful for preventing, treating or ameliorating  
CC medical conditions e.g. by protein or gene therapy. The genes are  
CC isolated from a range of human tissues disclosed in the specification.  
CC The nucleic acids, proteins, antibodies and (ant)agonists are useful in  
CC the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and  
CC ovarian cancer and other cancers of the adrenal gland, bone, bone marrow,  
CC breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune  
CC disorders e.g. Addison's disease, allergies, autoimmune haemolytic  
CC anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease,  
CC multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c)  
CC cardiovascular disorders such as myocardial ischaemia; (d) wound healing  
CC; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f)  
CC infectious diseases such as viral, bacterial, fungal and parasitic  
CC infections. Note: The sequence data for this patent did not form part of  
CC the printed specification, but was obtained in electronic format directly  
CC from WIPO at ftp.wipo.int/pub/published\_pct\_sequences

XX Novel human cancer associated protein encoded within open reading frame  
XX of cancer associated gene, useful as targets for diagnosing cancer.  
XX Disclosure; SEQ ID NO 557; 182pp; English.  
XX The invention relates to cancer-associated proteins (CAP) and the cancer-  
XX associated (CA) nucleic acids encoding them. The invention also relates  
XX to a method for treating cancers involving administering to a patient an  
XX inhibitor of CAP, and a method of screening for anticancer activity in a  
XX potential drug involving providing a cell that expresses a CA gene,  
XX contacting a tissue sample derived from a cancer cell with an anticancer  
XX drug candidate and monitoring the effect of the anticancer drug candidate  
XX on expression of the CA gene. The CAP proteins are useful for detecting  
XX cancer associated with expression of a CAP protein in a test cell sample  
XX and for screening for a bioactive agent capable of modulating the  
XX activity of a CAP protein. The CA nucleic acids are useful for diagnosing  
XX cancer, involving determining the expression of a CA nucleic acid in a  
XX tissue. This sequence represents a murine CA gene of the invention. Note:  
XX The sequence data for this patent did not form part of the printed  
XX specification, but was obtained in electronic format directly from WIPO  
XX at ftp.wipo.int/pub/published\_pct\_sequences

XX (SAGR-) SAGRES DISCOVERY INC.  
XX Morris DW, Malandro MS;  
XX WPI; 2004-499109/47.  
XX Novel human cancer associated protein encoded within open reading frame  
XX of cancer associated gene, useful as targets for diagnosing cancer.  
XX Claim 16; SEQ ID NO 560; 182pp; English.  
XX The invention relates to cancer-associated proteins (CAP) and the cancer-  
XX associated (CA) nucleic acids encoding them. The invention also relates  
XX to a method for treating cancers involving administering to a patient an  
XX inhibitor of CAP, and a method of screening for anticancer activity in a  
XX potential drug involving providing a cell that expresses a CA gene,  
XX contacting a tissue sample derived from a cancer cell with an anticancer  
XX drug candidate and monitoring the effect of the anticancer drug candidate  
XX on expression of the CA gene. The CAP proteins are useful for detecting  
XX cancer associated with expression of a CAP protein in a test cell sample  
XX and for screening for a bioactive agent capable of modulating the  
XX activity of a CAP protein. The CA nucleic acids are useful for diagnosing  
XX cancer, involving determining the expression of a CA nucleic acid in a  
XX tissue. This sequence represents a human CA gene of the invention. Note:  
XX The sequence data for this patent did not form part of the printed  
XX specification, but was obtained in electronic format directly from WIPO  
XX at ftp.wipo.int/pub/published\_pct\_sequences

XX PT Novel polynucleotide comprising Bifidobacterium genome sequence useful as  
XX PT a probe or primer for detecting and/or identifying Bifidobacterium longum  
XX PT in a biological sample.

XX PS Disclosure; SEQ ID NO 1102; 80pp; English.

XX CC The present invention describes a polynucleotide (I) comprising a  
XX CC sequence of a Bifidobacterium genome selected from the nucleotide  
XX CC sequences given in ABQ81842 and ABQ81843, or a sequence exhibiting at  
XX CC least 90% identity or which hybridises with the sequences given in  
XX CC ABQ81842 and ABQ81843. Also described is a polynucleotide (II) encoding a  
XX CC fusion protein, comprising a sequence selected from 1097 sequences given  
XX CC in ABP6528 to ABP6354 ligated in frame to a polynucleotide encoding a  
XX CC heterologous polypeptide. (I) has antidiarrheic and antibacterial  
XX CC activities, and can be used as an inhibitor of Salmonella. (I) (which is  
XX CC a probe) is useful for the detection and/or identification of  
XX CC Bifidobacterium longum in a biological sample. A carrier containing the  
XX CC lactic acid bacterium Bifidobacterium longum NCC2705 (CNCM I-2618) can be

used for preventing and/or treating diarrhoea brought about by pathogenic bacteria and/or rotavirus. The carrier is a food composition selected from milk, yogurt, curd, cheese, fermented milks, milk based fermented products, ice-creams, fermented cereal based products, milk based powders, infant formula, pet food or a pharmaceutical composition selected from tablets, liquid bacterial suspensions, dried oral supplement, wet oral supplement, dry tube feeding or wet tube feeding. (I) is useful in DNA arrays or chips to carry out analysis of the expression of the Bifidobacterium gene. ABQ81844 to ABQ81850 represent Bifidobacterium related nucleotide sequences given in the Sequence Listing from the present invention but not mentioned further within the specification. N.B. The sequence data for this patent is not represented in the printed specification but is based on sequence information supplied by the European Patent Office

XX New recombinant DNA constructs useful in the field of biochemistry and  
XX genetics, and in particular for producing transgenic plants with improved  
XX biological characteristics.  
XX  
XX Claim 1; SEQ ID NO 4894; 14pp; English.  
XX  
XX The invention relates a recombinant DNA construct comprising a  
XX polynucleotide having any of 5544 nucleotide sequences (cDNAs SEQ ID NO:  
XX 1-5544) and encoding a polypeptide with any of 5544 amino acid sequences  
XX (SEQ ID NO: 5545-11088). The cDNAs and proteins are from corn, soybean,  
XX Arabidopsis, wheat and rape but the specification does not indicate which  
XX sequences is derived from which organism. Also included is a method of  
XX producing a plant having an improved property, comprising transforming a  
XX plant with a recombinant DNA construct comprising a promoter region  
XX functional in a plant cell operably joined to a polynucleotide encoding a  
XX polypeptide associated with the property, and growing the transformed  
XX plant. The property is selected from improving plant cold tolerance, for  
XX manipulating growth rate in plant cells by modification of the cell cycle  
XX pathway, for improving plant drought tolerance, for providing increased  
XX resistance to plant disease, for galactomannan production, for production  
XX of plant growth regulators, for improving plant heat tolerance, for

CC improving plant tolerance to herbicides, for increasing the rate of  
CC homologous recombination in plants, for lignin production, for improving  
CC plant tolerance to extreme osmotic conditions, for improving plant  
CC tolerance to pathogens or pests, for yield improvement by modification of  
CC photosynthesis, for modifying seed oil yield and/or content, for  
CC modifying seed protein yield and/or content, for yield improvement by  
CC modification of carbohydrate, nitrogen or phosphorus use and/or uptake  
CC and for yield improvement by providing improved plant growth and  
CC development under at least one stress condition. The polynucleotide may  
CC also encode a plant transcription factor. The methods and compositions of  
CC the present invention are useful in the field of biochemistry and  
CC genetics, in particular for producing transgenic plants with improved  
CC biological characteristics such as increased yield, improved plant  
CC flow, increasing plant tolerance to cold or heat, improving plant  
CC tolerance to extreme osmotic and drought conditions, and improving plant  
CC tolerance to plant pests or pathogens. They can also be used in physical  
CC arrays of molecules, plant breeding markers, computer-based storage and  
CC analysis systems. The present sequence is one of the 5544 plant cDNA  
CC sequences of the invention. Note: The sequence data for this patent did  
CC not form part of the printed specification, but was obtained in  
CC electronic format directly from USPTO at  
CC segdata.uspto.gov/sequence.html?docID=20040216190.

The invention relates to an isolated nucleic acid molecule (I) comprising  
a nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) of the  
specification or its complement. (I) is useful for: (a) assessing whether  
a patient is afflicted with prostate cancer; (b) monitoring the  
progression of prostate cancer in a patient; (c) assessing the efficacy  
of a test compound to inhibit prostate cancer in a patient; (d) assessing  
the efficacy of a therapy for inhibiting prostate cancer in a patient;  
(e) selecting a composition for inhibiting prostate cancer in a patient;  
(f) assessing the prostate cell carcinogenic potential of a compound; (g)  
determining whether prostate cancer has metastasized in a patient; (h)  
assessing the aggressiveness or indolence of prostate cancer in a patient  
; (I) is also useful as a pharmacodynamic or pharmacogenomic marker

XX
XX Primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs.
XX
PS Claim 1; SEQ ID NO 5189; 2537pp + Sequence Listing; English.
XX
XX The present invention describes primer sets for synthesizing 5602 full-length cDNAs defined in the specification. Where a primer set comprises:
CC (a) an oligo-dT primer and an oligonucleotide complementary to the
CC complementary strand of a polynucleotide which comprises one of the 5602
CC nucleotide sequences defined in the specification, where the
CC oligonucleotide comprises at least 15 nucleotides; or (b) a combination
CC of an oligonucleotide comprising a sequence complementary to the
CC complementary strand of a polynucleotide which comprises a 5'-end
CC sequence and an oligonucleotide comprising a sequence complementary to a
CC polynucleotide which comprises a 3'-end sequence, where the
CC oligonucleotide comprises at least 15 nucleotides and the combination of
CC the 5'-end sequence/3'-end sequence is selected from those defined in the
CC specification. The primer sets can be used in antisense therapy and in
CC gene therapy. The primers are useful for synthesizing polynucleotides,
CC particularly full-length cDNAs. The primers are also useful for the
CC detection and/or diagnosis of the abnormality of the proteins encoded by
CC the full-length cDNAs. The primers allow obtaining of the full-length
CC cDNAs easily without any specialised methods. AAH03166 to AAH13628 and

PS Disclosure; Fig 2; 68pp; Spanish.
XX
XX The invention relates to a novel method for identifying defoliating and/or non-defoliating pathogenic types of Verticillium dahliae in a sample of plant material by use of a nested polymerase chain reaction. The method is used to differentiate between the pathotypes of V. dahliae of olives and cotton, e.g. to establish certification of disease-free plants, and also to study the epidemiology and control of V. dahliae. This polynucleotide sequence represents the DNA of a Verticillium dahliae defoliating plant of the invention

 XX New Helicobacter aliphatic amidase AmIE polypeptides and their encoding  
 PT sequences - used in diagnosis, treatment and prevention of Helicobacter  
 PT sp. infections in humans and animals.  
 XX Claim 2; Fig 4b; 51pp; English.  
 PS  
 XX The present sequence represents the Helicobacter pylori DNA insert full  
 CC restriction map of plasmid pILL405. The present invention describes H.  
 CC pylori aliphatic amidase AmIE. AmIE polypeptides and antibodies form  
 CC immunogenic, pharmaceutical and therapeutic compositions which can be  
 CC used in methods for detecting, treating or preventing Helicobacter sp.  
 CC (particularly H. pylori and H. heilmannii) infections, especially chronic  
 CC gastroduodenal disorders like gastritis, dyspepsia and peptic ulcers in  
 CC man, and porcine gastric ulcers in pigs. They are administered in  
 CC immunologically/pharmacologically effective amounts by an oral,  
 CC intradermal, intramuscular, intravenous or mucosal route to a patient. A  
 CC detection kit for a Helicobacter infection comprises any AmIE  
 CC polynucleotides with any of the vectors given in the present invention.  
 CC The polypeptides are used to in a process to degrade acrylamide,  
 CC acetamide, propionamide and isobutyramide. The polypeptides are also used  
 CC to screen for active substrates that inhibit Helicobacter sp. amidase  
 CC activity. The polynucleotides encoding the aliphatic amidase AmIE  
 CC polypeptides are the first to be characterized at the molecular level.  
 CC Methods involving such polypeptides are preferred to urease-based methods  
 CC because of the presence of urea positive bacteria in porcine  
 CC gastrointestinal tracts

 DR Novel nucleic acids and polypeptides for diagnosis, treatment of central  
 PT and peripheral nervous system diseases and neuropathies, such as  
 PT Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic  
 PT lateral sclerosis.  
 XX Example 2; SEQ ID NO 730; 300pp; English.  
 PS The present invention relates to the isolation of novel human  
 CC polynucleotide sequences and their encoding polypeptides. The novel  
 CC polypeptides exhibit activities relating to angiogenesis, cytokine, cell  
 CC proliferation, cell differentiation, antiinflammatory, and stem cell  
 CC growth factor activities. The polypeptides are involved in the  
 CC proliferation, differentiation and survival of pluripotent and totipotent  
 CC stem cells, and are useful for re-engineering damaged or diseased  
 CC tissues, transplantation, manufacture of bio-pharmaceuticals and  
 CC development of bio-sensors. The polypeptides can be used to manipulate  
 CC stem cells in culture to give rise to neuroepithelial cells that can be  
 CC used to augment or replace cells damaged by illness, autoimmune disease,  
 CC accidental damage or genetic disorders. The polypeptides induce the  
 CC proliferation of neural cells and regeneration of nerve and brain tissue  
 CC and are useful for the treatment of central and peripheral nervous system  
 CC diseases and neuropathies, such as Alzheimer's, Parkinson's disease,  
 CC Huntington's disease, amyotrophic lateral sclerosis (ALS). The  
 CC polypeptides are also involved in chemotactic or chemokinetic activity,  
 CC regulation of haematopoiesis and are useful for treating myeloid or  
 CC lymphoid cell disorders, platelet disorders such as thrombocytopaenia and  
 CC for regeneration of bone, cartilage, tendon, ligament and/or nerve tissue  
 CC growth, in tissue repair, healing of burns, incisions, ulcers, for  
 CC treating osteoporosis, osteoarthritis, bone degenerative disorders, and  
 CC periodontal disease. The polypeptides are also useful for gut protection  
 CC or regeneration and treatment of lung or liver fibrosis, reperfusion  
 CC injury in various tissues, various immune deficiencies and disorders  
 CC including severe combined immunodeficiency (SCID), bacterial or fungal  
 CC infections, autoimmune disorders (e.g. multiple sclerosis, rheumatoid

CC arthritis, diabetes mellitus, myasthenia gravis), allergic reactions and  
 CC conditions, such as asthma or other respiratory problems. The  
 CC polypeptides are involved in thrombolysis or thrombosis and are useful in  
 CC treatment of various coagulation disorders (including hereditary  
 CC disorders such as haemophilia) or to enhance coagulation and other  
 CC homeostatic events in treating wounds resulting from trauma, surgery or  
 CC other causes. The polypeptides exhibit immune stimulating or immune  
 CC suppressing activity, and are useful for treating autoimmune diseases or  
 CC cancer. They also inhibit the growth, infection or function of infectious  
 CC agents such as bacteria, fungi, viruses, effect biorhythms or circadian  
 CC cycles of rhythms, fertility of male or female subjects, metabolism,  
 CC catabolism, and anabolism. ACD05827-ACD06027 represent novel contigs  
 CC assembled using expressed sequence tag (EST) sequences as seeds. Note:  
 CC The sequence data for this patent did not form part of the printed  
 CC specification, but was obtained in electronic format directly from WIPO  
 CC at ftp.wipo.int/pub/published\_pct\_sequences

XX New gene expression profile generated from primary, endothelial,  
 PT epithelial, and muscle cell types, useful for identifying disease  
 PT pathologies involving alterations of gene expression, e.g. cancer.

XX Disclosure; Page 617-618; 850pp; English.

XX The invention relates to a gene expression profile comprising one or more  
 CC genes (ABZ34889-ABZ35692) and generated from a cell type. The cell type  
 CC is a coronary artery endothelium, umbilical artery or vein endothelium,  
 CC aortic endothelium, dermal microvascular endothelium, pulmonary artery  
 CC endothelium, myometrium microvascular endothelium, keratinocyte  
 CC epithelium, bronchial epithelium, mammary epithelium, prostate  
 CC epithelium, renal cortical epithelium, renal proximal tubule epithelium,  
 CC small airway epithelium, renal epithelium, umbilical artery smooth  
 CC muscle, neonatal dermal fibroblast, pulmonary artery smooth muscle,  
 CC dermal fibroblast, neural progenitor cells, skeletal muscle, astrocytes,  
 CC aortic smooth muscle, mesangial cells, coronary artery smooth muscle,  
 CC bronchial smooth muscle, uterine smooth muscle, lung fibroblast,

CC osteoblasts or prostate stromal cell. The gene expression profile is used  
CC for determining the level of RNA expression for a sample, determining the  
CC phenotype of a cell and distinguishing cell types. The gene or a protein  
CC expression profile is useful in identifying disease pathologies involving  
CC alterations of gene expression. The assessment of expression profiles may  
CC provide meaningful information with respect to tumour type and stage,  
CC treatment methods, and prognosis. The gene or protein expression profile  
CC may also be used for creating microarrays. The microarray is useful for  
CC genetic and physical mapping of genomes, DNA sequencing, genetic or  
CC medical diagnosis, genotyping of organisms, confirming cell or tissue  
CC antifungal agents

PS Claim 1; SEQ ID NO 4752; 7273pp; English.  
XX  
CC The invention relates to human tumour-associated antigenic target (TAT)  
CC polypeptides, and their related nucleic acids. The TAT polypeptides are  
CC overexpressed in cancer tissues compared to normal tissues, and may thus  
CC serve as effective targets for the diagnosis and treatment of cancer in  
CC mammals. The invention also relates to nucleic acid and polypeptide  
CC sequences at least 80% identical to the TAT nucleic acids and  
CC polypeptides; expression vectors and host cells comprising a TAT nucleic

CC acid; an antibody specific for a TAT polypeptide; a peptide or organic  
CC molecule which binds to a TAT polypeptide; fusion proteins comprising a  
CC TAT polypeptide; and methods and compositions for the treatment or  
CC diagnosis of cancer in mammals. TAT polypeptides, nucleic acids,  
CC antibodies, antagonists, binding molecules and compositions are useful  
CC for diagnosing or treating a cell proliferative disorder associated with  
CC increased TAT expression, particularly cancers such as breast cancer,  
CC colorectal cancer, lung cancer, ovarian cancer, liver cancer, bladder  
CC cancer, pancreatic cancer, cervical cancer, cancers of the central  
CC nervous system, melanoma and leukaemia. TAT nucleic acids may further be  
CC used as hybridisation probes, in chromosome and gene mapping, in  
CC chromosome identification and in gene therapy. The present sequence  
CC represents a TAT nucleic acid of the invention

XX Novel isolated human peptide useful for treating disorders characterized by the absence of, inappropriate or unwanted expression of the receptor protein, and as immunogens to raise antibodies.

PS Claim 4; Fig 3; 88pp; English.

XX The invention relates to an isolated human peptide (S1) comprising an Na/C1-dependent organic solute cotransporter family member, an allelic variant or orthologue of (S1) encoded by a polynucleotide hybridising under stringent conditions to the opposite strand of a sequence appearing as ABK89238 and ABK9239, or a fragment of (S1) with at least 10 contiguous amino acids. A pharmaceutical composition comprising a modulator of S1 is useful for treating a disease or condition mediated by a human protease. S1 and its encoding nucleic acid are useful as models for the development of human therapeutics, for identifying therapeutic proteins, as targets for development of human therapeutic agents. S1 is useful to raise antibodies or to elicit another immune response, as a reagent in assays designed to quantitatively determine levels of the protein in biological fluids, as markers for tissues in which the corresponding protein is preferentially expressed, in drug screening assays, in cell-based or cell-free systems, to identify compounds that modulate cotransporter activity of the protein in its natural state, or an altered form that causes the specific disease or pathology associated

CC with the receptor (e.g. neuron tumour), as bait proteins in a two-hybrid or three-hybrid assay, to provide a target for diagnosing a disease or predisposition to disease mediated by the peptide, in pharmacogenomic analysis, and for treating a disorder characterised by an absence of, in appropriate or unwanted expression of S1. An anti-S1 antibody is useful for isolating and purifying S1, to detect S1 in cells or tissues, in situ, in vitro or in a cell lysate or supernatant, to assess abnormal tissue distribution or abnormal expression during development or progression of a biological condition, and for inhibiting a protein function. S1 nucleic acids are useful as probes, primers, and chemical intermediates, in biological assays, for constructing recombinant vectors, host cells and transgenic animals, for expressing antigenic portions of the S1 proteins, or for designing ribozymes. A vector comprising the S1 nucleic acid is useful for producing an S1 protein or peptide, for conducting cell-based assays involving the protein or its fragment, for identifying protein mutants whose functions are affected, and to produce non-human transgenic animals. The gene for the cotransporter is located on chromosome 5. The present sequence genomic DNA for the cotransporter protein

XX Isolated proteins or peptides that are expression products of genes  
PT derived from microorganisms producing aminoglycoside antibiotics.  
PT  
XX Example 1; Page 185-199; 367pp; German.  
XX This invention describes novel isolated proteins or peptides that are  
CC expression products of genes derived from aminoglycoside-producing  
CC microorganisms. The proteins or peptides are functional for a step in the  
CC biosynthesis of aminoglycoside antibiotics, especially butirosin,  
CC gentamicin, neomycin, fortimicin, tobramycin, apramycin, paromomycin,  
CC hygromycin B, ribostamycin, sisomicin, sisomicin, kanamycin, nebramycin,  
CC sel domycin, destomycin, istamycin, sannamycin, dactimicin, sporaricin,  
CC bluensomycin, ashimycin, lividomycin and spectinomycin. The invention  
CC also describes a) isolated nucleic acids encoding the proteins or  
CC peptides which are under the control of a regulatory sequence, especially  
CC a promoter; b) transformation vectors containing the nucleic acids; c)  
CC cells containing the nucleic acids and/or the proteins or peptides; d) a  
CC method of producing the cells by transforming cells with vectors as above  
CC ; e) aminoglycosides produced by culturing the cells; f) producing  
CC aminoglycosides by culturing cells as above and isolating aminoglycosides  
CC from the cells and/or culture supernatant and g) pharmaceutical  
CC compositions containing the aminoglycosides. The aminoglycosides are  
CC useful for treating bacterial or viral infections, especially infections  
CC with Gram-positive or -negative bacteria, e.g. *Escherichia coli* or  
CC *Klebsiella*. This sequence encodes proteins (AED48605-AED48653) from  
CC *Streptomyces rimosus* (DDBJ reference AJ628955) involved in the synthesis  
CC of paromomycin.

XX Claim 88; Page 656-669; 673pp; English.  
PS  
XX Sequences AAH51110-AAH51593 represent human DNA fragments which contain  
CC biallelic markers. The sequences are related to various human genes  
CC including microsomal glutathione S-transferase II (MGSTII), malate  
CC decarboxylase enzyme (DMEI/MEI), cytochrome P450, glutathione  
CC reductase/synthase (GSHR/GSHS), flavin-containing monooxygenases (FMO),  
CC gamma-glutamyltransferase 5 (GGT5), dipeptidase (DP), glucose 6-phosphate  
CC dehydrogenase (G6PDH), phosphogluconate dehydrogenase (PGDH), and uridine  
CC diphosphate glucuronosyl transferases (UGT2). Each of these sequences  
CC contains a biallelic marker/polymorphism, which is represented in the  
CC sequence as a degenerate/undefined base. The genes to which the biallelic  
CC marker containing sequences are related are involved in drug metabolism.  
CC Sequences AAH51594 - AAH51598 represent the genomic sequence of the  
CC MGSTII gene and four alternative MGSTII cDNA sequences. AAB62905-AAB62906  
CC are MGSTII gene products. PCR primers AAH51599 and AAH51600 are used in  
CC an example for the amplification of human genomic DNA fragments. The  
CC invention includes a method of genotyping comprising determining the  
CC identity of a nucleotide at a DME- or MGSTII-related biallelic marker in  
CC a biological sample. The method is used to determine the frequency in  
CC a population of an allele of a DME- or MGST-II related biallelic marker and  
CC to select an individual for inclusion in a clinical trial of a drug  
CC treatment. The method is also used to detect association between allele  
CC and phenotype, and to detect association between haplotype and phenotype.  
CC The polynucleotides are used, in hybridization assays, sequencing assays  
CC or allele specific amplification assays. The method can be used to  
CC determine whether an individual suffers or is at risk of developing  
CC asthma or is at risk of developing hepatotoxicity on treatment with  
CC zileuton

XX PT  
XX claim 16; seqid 506; 310pp; English.  
XX PS  
XX The invention relates to an isolated nucleic acid comprising at least 10  
CC contiguous nucleotides of any of the 233 polynucleotide sequences given  
CC in the specification, or its complement. The nucleic acids encode cancer-  
CC associated proteins. Also included are an expression vector comprising  
CC the isolated nucleic acid cited above, a host cell comprising the above  
CC recombinant nucleic acid or expression vector, a microarray for detecting  
CC a cancer-associated (CA) nucleic acid comprising at least one probe  
CC comprising at least 10 contiguous nucleotides of any of the above-  
CC mentioned nucleotide sequences, an isolated polypeptide (encoded within  
CC an open reading frame of a CA sequence selected from any of the 95  
CC polynucleotide sequences as mentioned in the specification, or its  
CC complement), an isolated antibody, (or its antigen binding fragment) that  
CC binds to the above polypeptide, a hybridoma that produces the above  
CC monoclonal antibody, a pharmaceutical composition comprising the above  
CC antibody and a pharmaceutical excipient, a kit for detecting cancer  
CC cells (comprising the antibody cited above, methods for diagnosing cancer  
CC or for detecting the presence or absence of cancer cells in an  
CC individual, a method for inhibiting a growth of cancer cells in an  
CC individual, a method for delivering a therapeutic agent to cancer cells  
CC in an individual, an electronic library comprising the above  
CC polynucleotide or polypeptide (or their fragments), methods of screening  
CC for anticancer activity or for a bioactive agent capable of modulating  
CC the activity of a CA protein (CAP), methods for detecting cancer  
CC associated with expression of a polypeptide in a test cell sample, a  
CC method for treating cancers and a method for inhibiting the expression of  
CC CA gene in a cell. The composition and methods are useful for detecting,  
CC diagnosing, preventing and treating cancers, especially lymphoma and  
CC leukaemia. These may also be used in screening for agents that modulate

CC cancer. The present sequence is a human CAP genomic sequence. Note: The  
CC sequence data for this patent did not form part of the printed  
CC specification, but was obtained in electronic format directly from WIPO

XX Disclosure; SEQ ID NO 15263; 1037pp; English.

CC The present invention describes substantially purified human proteins  
CC (referred to as open reading frame, ORFX, where X is 1-11491 (see Table 1  
CC in the specification). ABN15762 to ABN27252 encode the human ORFX  
CC proteins given in ABP0010 to ABP1500. ORFX proteins are useful for  
CC treating or preventing a pathology associated with an ORFX-associated  
CC disorder in humans, and in the manufacture of a medicament for treating a  
CC syndrome associated with ORFX-associated disorder. ORFX polynucleotide  
CC sequences can be used in gene therapy. ORFX sequences can be used in the  
CC treatment of cancer, hyperproliferative disorders, cirrhosis of liver,  
CC psoriasis, benign tumours, keloid, degenerative disorders, haemorrhage,  
CC osteoarthritis, neurodegenerative disorders, disorders related to organ  
CC transplantation, cardiovascular diseases, diabetes mellitus, systemic  
CC lupus erythematosus, hypertension, hypothyroidism, cholesterol ester  
CC storage disease, various immune deficiencies and disorders, infectious

CC diseases, autoimmune disorders such as multiple sclerosis, rheumatoid  
CC arthritis, autoimmune thyroiditis, myasthenia gravis, graft-versus-host  
CC disease and autoimmune inflammatory eye disease. ORFX proteins are also  
CC useful for treating burns, incisions, ulcers, for treating osteoporosis,  
CC bone degenerative disorders, or periodontal disease, and for gut  
CC protection or regeneration and treatment of lung or liver fibrosis,  
CC reperfusion injury in various tissues and conditions resulting from  
CC systemic cytokine damage. N.B. The sequence data for this patent did not  
CC form part of the printed specification, but was obtained in electronic  
CC format directly from WIPO at ftp.wipo.int/pub/published\_pct\_sequences

XX New polynucleotide sequences obtained from various cDNA libraries, useful  
XX as hybridization probes, as oligomers for PCR, for chromosome and gene  
XX mapping, in the recombinant production of protein, or in generating  
XX antisense DNA or RNA.  
XX Claim 1; SEQ ID NO 28686; 44pp; English.  
XX The invention relates to an isolated polynucleotide comprising any one of  
XX 38043 cDNA sequences, appearing as ACH12789-ACH50831, whose sequence was  
XX determined by the technique of SBH (sequencing by hybridisation). Also  
XX included is a purified polypeptide comprising a sequence corresponding to  
XX a reading frame of the novel polynucleotide. The nucleic acid sequences  
XX are useful in diagnostics as expressed sequence tags (EST) for  
XX identifying expressed genes or for physical mapping of the human genome,  
XX in forensics, in assessing biodiversity, or in identifying mutations  
XX responsible for genetic disorders and other traits. The nucleotide  
XX sequences are also useful as hybridisation probes, as oligomers for PCR,  
XX for chromosome and gene mapping, in the recombinant production of

CC protein, or in generating antisense DNA or RNA. The purified polypeptide  
CC is useful for generating antibodies specific for it. The present sequence  
CC is one of the 38043 isolated cDNA/EST sequences. Note: The present sequence  
CC for this patent did not form part of the printed specification, but was  
CC obtained in electronic format directly from USPTO at

XX  
CC The invention relates to nucleic acids (ADN12486-ADN13970) isolated from  
CC human prostate, colon, lung and breast cancer cDNA libraries, and to 57  
CC proteins (ADN13971-ADN14027) encoded by a subset of these cDNA sequences  
CC (ADN13914-ADN13970). The invention also relates to vectors and host cells  
CC comprising a nucleic acid of the invention; a method for the recombinant  
CC production of a protein of the invention; a method for the recombinant  
CC protein of the invention; a polynucleotide library comprising at least  
CC one nucleic acid sequence of the invention; a method for detecting a  
CC cancerous cell by PCR or probe hybridisation; inhibiting a cancerous  
CC phenotype (particularly aberrant proliferation) of a cell; a method of  
CC identifying an agent that modulates the biological activity of a gene  
CC product differentially expressed in a cancerous cell compared with a  
CC normal cell; and a method of treating a cancer patient using the agent  
CC identified. The nucleic acids and polypeptides can be used to diagnose,  
CC prognose, treat or prevent cancers such as prostate, colon, lung or  
CC breast cancer, and can also be used to screen for drugs for the treatment  
CC of cancer. The nucleic acids can also be used for gene mapping, tissue

CC typing and tissue profiling. The present sequence represents a  
CC specifically claimed cancer-related cDNA of the invention. Note: The  
CC sequence data for this patent did not form part of the printed  
CC specification, but was obtained in electronic format directly from WIPO

XX	XX	Novel polynucleotide comprising Bifidobacterium genome sequence useful as a probe or primer for detecting and/or identifying Bifidobacterium longum in a biological sample.									
PT	PT	Disclosure; SEQ ID NO 1104; 80pp; English.									
PS	PS	The present invention describes a polynucleotide (I) comprising a sequence of a Bifidobacterium genome selected from the nucleotide sequences given in ABQ81842 and ABQ81843, or a sequence exhibiting at least 90% identity or which hybridises with the sequences given in ABQ81842 and ABQ81843. Also described is a polynucleotide (II) encoding a fusion protein, comprising a sequence selected from 1097 sequences given in ABP65258 to ABP66354 ligated in frame to a polynucleotide encoding a heterologous polypeptide. (I) has antidiarrhetic and antibacterial activities, and can be used as an inhibitor of Salmonella. (I) (which is a probe) is useful for the detection and/or identification of Bifidobacterium longum in a biological sample. A carrier containing the lactic acid bacterium Bifidobacterium longum NCC2705 (CNCM I-2618) can be used for preventing and/or treating diarrhoea brought about by pathogenic bacteria and/or rotavirus. The carrier is a food composition selected from milk, yogurt, curd, cheese, fermented milks, milk based fermented products, ice-creams, fermented cereal based products, milk based powders, infant formula, pet food or a pharmaceutical composition selected from tablets, liquid bacterial suspensions, dried oral supplement, wet oral supplement, dry tube feeding or wet tube feeding. (I) is useful in DNA arrays or chips to carry out analysis of the expression of the Bifidobacterium gene. ABQ81844 to ABQ81850 represent Bifidobacterium related nucleotide sequences given in the Sequence Listing from the present invention but not mentioned further within the specification. N.B. The sequence data for this patent is not represented in the printed specification but is based on sequence information supplied by the European Patent Office

XX
XX Novel biallelic markers used to construct a high density disequilibrium
XX map of the human genome.
XX
XX Claim 3; Page 748; 2745pp; English.
XX
XX AAZ65654 to AAZ69578 represent human biallelic markers from the present
XX invention, which contain a polymorphic base at position 24 of their
XX nucleotide sequences. AAZ69579 to AAZ77440 represent amplification
XX primers for the biallelic markers. The biallelic markers of the invention
XX have a variety of uses: they can be used for high density mapping of the
XX human genome, and in complex association studies and haplotyping studies
XX which are useful in determining the genetic basis for disease states.
XX Compositions and methods of the invention can also be useful for the
XX identification of the targets for the development of pharmaceutical
XX agents and diagnostic methods, as well as the characterisation of the
XX differential efficacious responses to and side effects from
XX pharmaceutical agents acting on a disease as well as other treatment.
XX N.B. The SEQ ID NOS 2852, 2913, 2974, 3035, 3096, 3157, 3227, 3297 and
XX 3367, are not actually given a sequence in the Sequence Listing from the

XX
XX Sequences ABP31028-ABP35561 represent 4334 novel human proteins
XX designated ORF (open reading frame) 1-4534, and sequences ABN75054-
XX ABN79587 represent cDNAs encoding them. The invention also encompasses
XX polypeptides at least 80% identical to the ORF1-ORF4534 (collectively
XX referred to as ORFX) proteins, polynucleotides at least 85% identical to
XX the ORFX nucleic acid sequences, vectors and host cells comprising ORFX
XX polynucleotides, the recombinant production of ORFX proteins, antibodies
XX specific for ORFX proteins, methods of detecting ORFX polynucleotides and
XX polypeptides, methods of screening for modulators of ORFX expression or
XX activity, and methods of screening individuals for a predisposition to an
XX ORFX-associated disorder. The ORFX proteins of the invention have a wide
XX range of biological activities, such as cytokine, cell proliferation,
XX cell differentiation, immune modulation, haematopoiesis regulation,
XX tissue growth, angiogenesis, activin or inhibin activity, chemotactic/
XX chemokinetic activity, haemostatic activity, tumour inhibition activity,
XX receptor/ligand, antiinflammatory activity, tumour inhibition activity,
XX and antiinfective activity, and may also be involved in the determination
XX of bodily characteristics, fertility and behaviour. ORFX proteins,
XX nucleic acids and antibodies may be used in the treatment of cancers,
XX other proliferative disorders such as psoriasis and benign tumours,
XX neurological disorders such as epilepsy and Alzheimer's disease,

```

CC cardiovascular diseases, immune system disorders, disorders related to  
CC organ transplantation, disorders of tissue growth and regeneration,  
CC diseases such as diabetes mellitus, hypothyroidism, and cholesterol  
CC storage disease, and infectious diseases caused by viral, bacterial,  
CC fungal and other pathogens. ORFX nucleic acids may also be used as a  
CC source of primers and probes in the detection of ORFX genomic sequences  
CC or transcripts, in the identification and cloning of homologous  
CC sequences, in genetic diagnosis, and in forensic biology. The ORFX  
CC nucleic acids may additionally be used to produce transgenic animals  
CC which may be useful for studying the function and/or activity of ORFX  
CC protein, and in drug screening. The ORFX proteins may also be used as  
CC immunogens to generate specific antibodies, which are useful in the  
CC diagnosis, treatment and monitoring of ORFX-associated diseases

XX synthesizing DNA fragment corresponding to predicted RNA structure,  
XX performing reporter gene assay after placing the DNA upstream of reporter  
XX gene.  
XX Claim 12; Page 27; 35pp; English.  
XX The present invention relates to a method of identifying RNA-binding  
CC molecule comprising predicting the structure of RNA-fragment, selecting  
CC suitable predicted RNA fragment with an individual stem, synthesising a  
CC DNA-fragment corresponding to the RNA fragment, inserting the DNA  
CC fragment in upstream proximity of reporter assay gene to form reporter  
CC construct and performing a reporter gene assay which detects interaction  
CC between a molecule to be tested for RNA-binding and RNA fragment of the  
CC reporter construct. The method is useful for identifying an RNA binding  
CC molecule. The present sequence is human acyl CoA:diacylglycerol-  
CC acetyltransferase (DGAT) RNA fragment. This sequence is used to  
CC illustrate the method of the invention

PT New substantially purified nucleic acid molecule that encodes a cotton  
PT protein or its fragment, useful as molecular tool for the targeting and  
PT isolation of novel genes for plant protection and improvement.  
XX  
PS Claim 1; SEQ ID NO 4248; 30pp; English.

XX The invention relates to a substantially purified nucleic acid molecule  
CC that encodes a cotton protein or its fragment comprising an EST  
CC (expressed sequence tag) appearing as ADP9990-ADP95919. Also included  
CC are a substantially purified cotton protein or its fragment encoded by a  
CC nucleic acid molecule above and a transformed plant (having a nucleic  
CC acid molecule which comprises: an exogenous promoter region which  
CC functions in a plant cell to cause the production of a mRNA molecule; a  
CC structural nucleic acid molecule comprising one of the ESTs or their  
CC complements; a 3' non-translated sequence that functions in the plant  
CC cell to cause termination of transcription and addition of polyadenylated  
CC ribonucleotides to a 3' end of the mRNA molecule). The ESTs are useful as  
CC molecular tool for the targeting and isolation of novel genes for plant  
CC protection and improvement. The ESTs are useful for developing new  
CC strategies for understanding critical plant developmental and metabolic  
CC pathways, for isolating genes and promoters, for identifying and mapping  
CC the genes involved in developmental and metabolic pathways, and for  
CC determining gene function. The cotton nucleic acid molecules are useful  
CC as molecular tags to isolate genetic regions, isolate genes, map genes,  
CC and determine gene function. The nucleic acid molecules are useful for  
CC determining if genes are members of a particular gene family and for use  
CC in marker-assisted breeding programs. The present sequence is one of the  
CC 4930 cotton ESTs of the invention. NOTE: The sequences are not displayed

CC in the specification but are available in electronic format from the  
CC USPTO at seqdata.uspto.gov/sequence.html?DocID=20040123338.

/note="Organ: Eye; Vector: pCMVSPORT6; A human iris  
 library (bx) was normalized by self-subtraction. One

portion of double stranded plasmid DNA representing the  
 library was linearized by NotI. This NotI digested library

was used as a template for biotinylated RNA synthesis using SP6 RNA polymerase. Another portion of the double stranded plasmid library was converted to single-stranded circles in vitro using Gene II and Exonuclease III (Life Technologies). Single-stranded DNA (1 mg) was hybridized (Cot 500) with 41 mg of Bio-RNA and vector blocking oligonucleotides. The hybridized Bio-RNA/ss-circles were removed by streptavidin:phenol extraction. EST analysis was performed on the library at the NIH Intramural Sequencing Center (NISC)."

    converted to a DNA strand by Okayama-Berg method. The
    obtained cDNA vectors were used for transformation of
    competent cells E. coli Top10F by electroporation method.

The cDNA libraries constructed by this method are
full-length enriched cDNA library. After analyzing and
sequencing about 2,000 - 3,000 colonies in original cDNA
library, the abundant cDNAs were selected and amplified by
PCR reaction using vector region primer including T7
promotor as 5' primer and N(dT)14 as 3' primer. The PCR
products were used as template for synthesis of
biotinylated single stranded RNA by in vitro transcription
reaction. The synthesized RNA probes were hybridized with
antisense single stranded cDNAs prepared from original
library and incubated with avidin-gel. After removing
DNA-RNA hybrids by centrifuge, the substracted cDNA
libraries were constructed by transformatoin of the
remaining DNA into competent cells E. coli Top10F with
electroporation method."

/note="Organ: Liver; Vector: pCNS-D2; Site\_1: EcoRI; Site\_2: NotI; The poly (A) + RNA was dephosphorylated with bacterial alkaline phosphatase (BAP) and then decapped with tobacco acid pyrophosphatase (TAP). The decapped intact mRNA was ligated with DNA-RNA linker including EcoRI site by treatment of T4 RNA ligase and the first strand cDNA was synthesized from oligo dt-selected mRNA by priming with dt-tailed vector. The dt-tailed vector was adjusted to have about 60nt. The cDNA vector was circularized with E. coli DNA ligase after digestion of EcoRI which site is also included in vector. An RNA strand converted to a DNA strand by Okayama-Berg method. The obtained cDNA vectors were used for transformation of competent cells E. coli Top10F' by electroporation method. The cDNA libraries constructed by this method are full-length enriched cDNA library."

The decapped intact mRNA was ligated with DNA-RNA linker including EcoRI site by treatment of T4 RNA ligase and the first strand cDNA was synthesized from oligo dt-selected mRNA by priming with dt-tailed vector. The dt-tailed vector was adjusted to have about 60nt. The cDNA vector was circularized with E. coli DNA ligase after digestion of EcoRI which site is also included in vector. An RNA strand converted to a DNA strand by Okayama-Berg method. The obtained cDNA vectors were used for transformation of competent cells E. coli Top10F' by electroporation method. The cDNA libraries constructed by this method are full-length enriched cDNA library."

Computational Analysis of Full-Length Mouse cDNAs Compared with Human Genome Sequences Mamm. Genome. 12, 673-677 (2001)

Normalization and subtraction of cap-trapper-selected cDNAs to prepare full-length cDNA libraries for rapid discovery of new genes. Genome Res. 10 (10), 1617-1630 (2000)

RIKEN integrated sequence analysis (RISA) system--384-format sequencing pipeline with 384 multicapillary sequencer. Genome Res. 10 (11), 1757-1771 (2000)

Computer-based methods for the mouse full-length cDNA encyclopedia: real-time sequence clustering for construction of a nonredundant cDNA library. Genome Res. 11 (2), 281-289 (2001)

cDNA library was prepared and sequenced in Mouse Genome Encyclopedia Project of Genome Exploration Research Group in RIKEN Genomic Sciences Center and Genome Science Laboratory in RIKEN Division of Experimental Animal Research in Riken contributed to prepare mouse tissues.

Cells were provided by Hiroo Iwata (Department of Reproductive Materials Field of Tissue Engineering Institute for Frontier Medical Sciences, Sakyo-ku, Kyoto, 606-8507, Japan) whose assistance we gratefully acknowledge.

Please visit our web site (<http://genome.gsc.riken.go.jp>) for further details.

NEDO human cDNA project (New Energy and Industrial Technology Developmental Organization, Japan); cDNA library construction: Helix Research Institute (HRI); 5'-end one pass sequencing: HRI, Research Association for Biotechnology (RAB) and Biotechnology Center, National Institute of Technology and Evaluation; 3'-end one pass sequencing: RAB. The reason of remaining 5'-end 'N': This sequence was generated from 5'-end region of cDNA insert including about 20 base of the sequence before 'N'. This cDNA was obtained from oligo-capped cDNA library by which method 5'-end of mRNA was efficiently cloned. Therefore remaining 5'-end 'N' is important for a detection of transcription start site of this mRNA.

 RNA prepared and library constructed by W. Walter Lorenz (School of  
 Forest Resources, University of Georgia); plant material prepared  
 by Craig Zimmermann (School of Forest Resources, University of  
 Georgia) using rooted cuttings provided by the Forest Biology  
 Research Cooperative (FBRC) and the CCLONES project a the  
 University of Florida; sequencing done in the Laboratory for  
 Genomics and Bioinformatics, University of Georgia. Sequence ends  
 have been trimmed to exclude vector and regions below Phred quality  
 16. Three-prime sequences are presented as their reverse complement  
 and have been trimmed to exclude polyA.

Seq primer: ML3-21 (TGTAACAGCAGCGCCAGT)

POLYA=No.

/note="Vector: pSL1180; Site 1: EcoRI; Site 2: XhoI; The library was prepared from polyA+ RNA from the roots of 1-year-old loblolly pine (Pinus taeda) cuttings that were rooted and then planted in washed sand. The rooted cuttings were maintained for 27 days (April 2003 harvest) under ambient conditions in a local greenhouse. They were kept on a weekly regimen of 0.5x nutrient-complete Hoagland's solution and supplemented with additional water sufficient to maintain a 15% soil moisture content. Twenty-four hours (24 h) prior to harvesting roots for mRNA preparation, the potted trees were tipped 90 degree to lay the pots on their sides to induce a gravitropic response. Double-stranded cDNA was cloned unidirectionally into pSL1180. Inserts can be excised with EcoRI (5' end) and XhoI (3' end)."

 RNA prepared and library constructed by W. Walter Lorenz (School of Forest Resources, University of Georgia); plant material prepared by Craig Zimmermann (School of Forest Resources, University of Georgia) using rooted cuttings provided by the Forest Biology Research Cooperative (FBRC) and the CCLONES project at the University of Florida; sequencing done in the Laboratory for Genomics and Bioinformatics, University of Georgia. Sequence ends have been trimmed to exclude vector and regions below Phred quality 16. Three-prime sequences are presented as their reverse complement and have been trimmed to exclude polyA.  
 Seq primer: M13-21 (TGTAACACGACGCCAGT)  
 POLYA=No.

 /note="vector: pSL180; Site 1: EcoRI; Site 2: XhoI; The library was prepared from polyA+ RNA from the roots of 1-year-old loblolly pine (Pinus taeda) cuttings that were rooted and then planted in washed sand. The rooted cuttings were maintained for 27 days (April 2003 harvest) under ambient conditions in a local greenhouse. They were kept on a weekly regimen of 0.5x nutrient-complete Hoagland's solution and supplemented with additional water sufficient to maintain a 15% soil moisture content. Twenty-four hours (24 h) prior to harvesting roots for mRNA preparation, the potted trees were tipped 90 degree to lay the pots on their sides to induce a gravitropic response. Double-stranded cDNA was cloned unidirectionally into pSL180. Inserts can be excised with EcoRI (5' end) and XhoI (3' end)."

DEFINITION end, mRNA sequence.

ACCESSION CA661056

VERSION CA661056.1 GI:25239581

KEYWORDS EST.

synthesized from mRNA using a Poly (dT) sequence with a  
XhoI restriction site. EcoRI adapters were ligated to the  
blunt ended cDNA fragments followed by restriction with  
XhoI. The cDNA insert is protected from XhoI digestion via  
methylation during first strand cDNA synthesis. The cDNA  
fragments were directionally cloned into the EcoRI-XhoI  
restriction site of the pBluescript vector. The ligated  
cDNA fragments were transformed into E. coli Electromax  
DH10B host cells. Transformation efficiency: 4.0E+04  
Average insert Size by PCR: 1320 bp"

```

Baylor Plaza, Houston, TX 77030, USA

On Sep 1, 1999 this sequence version replaced gi:5757565.

INFORMATION: <http://www.hgsc.bcm.tmc.edu/> or email

gc-help@bcm.tmc.edu

CLONE LENGTH: This sequence does not necessarily represent the  
entire insert of this clone. Overlapping regions of clones are only  
sequenced and submitted once, so the sequence for the remainder of  
the insert may be found in the record for the adjacent clones.  
Overlapping clones are noted at the beginning and end of the  
Features listing.

#### ANNOTATION OF FEATURES:

STSs are identified using ePCR (Genome Res. 7:541-550) searches  
of a local database that includes entries from dbSTS, GDB, and  
local mapping efforts.

Repeats are identified using RepeatMasker (A. Smit and P. Green,  
unpublished.) for Human and Mouse sequences.

Genes and Region of sequence similarity are identified by BLAST  
(Nuc. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the  
EST and cDNA sequences. Genes demonstrate at least two exons  
flanked by consensus splice sites that maintained sequence  
continuity across the splice junctions. Sequences that are not  
identical matches are annotated as similar.

SEQUENCING READ COVERAGE: Sequencing is completed to a minimum  
standard of double strand coverage with a minimum of 2 clones and 2  
reads with no ambiguities or 2 chemistries with a minimum of 2  
clones and 3 reads with no ambiguities. If the sequence quality for  
a region does not meet this standard, it will be indicated in the  
annotation as Low Coverage.

QUALITY OF INDIVIDUAL BASES: This sequence meets stringent quality  
standards - estimated error rate less than 1 per 10,000 bases.  
Reports of lowest quality individual bases and measures of base  
quality are listed below. Description of the metrics can be found  
at URL:

<http://gc.bcm.tmc.edu:8088/quality.info/genbank.annotation.html>.

Reference  
Rat Genome Sequencing Consortium.  
Submitted (10-MAY-2003) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

On May 10, 2003 this sequence version replaced gi:23264229. The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

----- Genome Center  
Center: Baylor College of Medicine  
Center code: BCM  
Web site: http://www.hgsc.bcm.tmc.edu/  
Contact: hgsc-help@bcm.tmc.edu  
----- Project Information  
Center project name: GGPI  
Center clone name: CH230-183A24  
----- Summary Statistics  
Assembly program: Atlas 3.0;  
Consensus quality: 193499 bases at least Q40  
Consensus quality: 195436 bases at least Q30  
Consensus quality: 196841 bases at least Q20  
Estimated insert size: 201950; sum-of-contigs estimation  
Quality coverage: 6x in Q20 bases; sum-of-contigs estimation

-----  
\* NOTE: Estimated insert size may differ from sequence length  
(see http://www.hgsc.bcm.tmc.edu/docs/genbank\_draft\_data.html).  
\* NOTE: This is a 'working draft' sequence. It currently  
\* consists of 2 contigs. The true order of the pieces  
\* is not known and their order in this sequence record is  
\* arbitrary. Gaps between the contigs are represented as  
\* runs of N, but the exact sizes of the gaps are unknown.  
\* This record will be updated with the finished sequence  
\* as soon as it is available and the accession number will  
\* be preserved.

1 204625: contig of 204625 bp in length  
\* 204626 204725: gap of unknown length  
\* 204726 206082: contig of 1357 bp in length.

----- Project Information
Center project name: hzv
Center clone name: 147H21

```

This sequence was finished as follows unless otherwise noted:  
all regions were double-stranded, sequenced with an  
alternate chemistry, or covered by high quality data  
(i.e., phred quality >= 30); an attempt was made to resolve  
all sequencing problems, such as compressions and repeats;  
all regions were covered by at least one plasmid subclone  
or more than one M13 subclone; and the assembly was confirmed  
by restriction digest.

CLONE LENGTH: This sequence represents the entire insert of  
this clone unless otherwise noted. If there are overlapping  
clones, the overlaps are noted in the beginning and end of  
the Features section.

Center code: NISC
Web site: http://www.nisc.nih.gov
Contact: nisc.zoo@nhgri.nih.gov
----- Project Information
Center project name: ggc
Center clone name: 362A08

The sequence data in this record represents an 'enhanced'
version of a Phase 2 submission. Specifically, the indicated
order and orientation of each sequence contig has been
established using one or more of the following: read-pair
data from individual subclones, overlaps with neighboring
clones, alignment with available reference sequence (e.g.,
human), and/or confirmation by PCR testing. In addition,
the sequence assembly is based on at least 8X average
coverage in Q20 bases and has been reviewed to rule out
gross misassemblies, the low-quality ends of sequence
contigs have been trimmed away, and each base is associated
with a Phrap-derived quality score.
----- Summary Statistics
Sequencing vector: plasmid; n/a; 100% of reads
Chemistry: Dye-terminator Big Dye; 100% of reads
Assembly program: Phrap; version 0.990319
Consensus quality: 121178 bases at least Q40
Consensus quality: 121304 bases at least Q30
Consensus quality: 121341 bases at least Q20
Insert size: 125000; agarose-fp
Insert size: 121362; sum-of-contigs
Quality coverage: 8.26x in Q20 bases; agarose-fp
Quality coverage: 8.51x in Q20 bases; sum-of-contigs
-----
* NOTE: This is a 'working draft' sequence. It currently
* consists of 2 contigs. Gaps between the contigs
* are represented as runs of N. The order of the pieces
* is believed to be correct as given, however the sizes
* of the gaps between them are based on estimates that have
* provided by the submitter.
* This sequence will be replaced
* by the finished sequence as soon as it is available and
* the accession number will be preserved
* 1 25692: contig of 25692 bp in length
* 25693 25792: gap of unknown length
* 25793 121462: contig of 95670 bp in length.

----- Project Information  
Center project name: jrf  
Center clone name: 443K08

The sequence data in this record represents an 'enhanced'  
version of a Phase 2 submission. Specifically, the indicated  
order and orientation of each sequence contig has been  
established using one or more of the following: read-pair  
data from individual subclones, overlaps with neighboring  
clones, alignment with available reference sequence (e.g.,  
human), and/or confirmation by PCR testing. In addition,  
the sequence assembly is based on at least 8X average  
coverage in Q20 bases and has been reviewed to rule out  
gross misassemblies, the low-quality ends of sequence  
contigs have been trimmed away, and each base is associated

with a Phrap-derived quality score.  
----- Summary Statistics  
Sequencing vector: plasmid; n/a; 100% of reads  
Chemistry: Dye-terminator Big Dye; 100% of reads  
Assembly program: Phrap; version 0.990319  
Consensus quality: 119217 bases at least Q40  
Consensus quality: 120157 bases at least Q30  
Consensus quality: 120697 bases at least Q20  
Insert size: 148000; agarose-fp  
Quality coverage: 9.21x in Q20 bases; agarose-fp  
Quality coverage: 11.27x in Q20 bases; sum-of-contigs  
-----  
\* NOTE: This is a 'working draft' sequence. It currently consists of 8 contigs. Gaps between the contigs are represented as runs of N's. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have been provided by the submitter.

\* This sequence will be replaced

\* By the finished sequence as soon as it is available and the accession number will be preserved.

\* 1 47612: contig of 47612 bp in length

\* 47613 47712: gap of unknown length

\* 47713 56509: contig of 8797 bp in length

\* 56510 56609: gap of unknown length

\* 56610 59676: contig of 3067 bp in length

\* 59677 59776: gap of unknown length

\* 59777 73256: contig of 13480 bp in length

\* 73257 73356: gap of unknown length

\* 73357 82649: contig of 9293 bp in length

\* 82650 82749: gap of unknown length

\* 82750 85544: contig of 2795 bp in length

\* 85544 85644: gap of unknown length

\* 85645 106869: contig of 21225 bp in length

\* 106870 106969: gap of unknown length

\* 106970 121581: contig of 14612 bp in length.

On Jul 27, 2004 this sequence version replaced gi:45752574.
Genes were predicted from the integrated results of the following:
GENSCAN (http://CCR-081.mit.edu/GENSCAN.html), FGENESH
(http://www.softberry.com/), GeneMark.hmm
(http://opal.biology.gatech.edu/GeneMark/), GlimmerM
(http://www.tigr.org/tdb/glimmer/glmr_form.html), RiceHMM

```

(<http://rgp.dna.affrc.go.jp/RiceHMM/>), SplicePredictor (<http://bioinformatics.tastate.edu/cgi-bin/sp.cgi>), sim4 (<http://globin.cse.psu.edu/html/docs/sim4.html>), gap2 (<http://www.tigr.org/software/glimmer/>), BLASTN and BLASTX. The genomic sequence was searched against NCBI NonRedundant Protein database, nr (<ftp://ncbi.nlm.nih.gov/blast/db>) and the cDNA sequence database at RGP or DDBJ. Protein homologies of the coding regions were searched against NCBI NonRedundant Protein database with BLASTP. ESTs represent the identified cDNA sequences using BLASTN with the corresponding DDBJ accession no. and RGP clone ID. Full-length cDNAs represent the identified cDNA sequences using BLASTN with the corresponding DDBJ accession no.

A gene with identity or significant homology to a protein is classified based on the protein name to indicate the homology level such as same name, 'putative', and '-like protein'. A gene without significant homology to any protein but with full-length cDNA or EST homology (covering almost the entire length of partial sequence) is classified as an 'unknown' protein. A gene predicted by two or more gene prediction programs is classified as a 'hypothetical' protein according to IRGSP standard. A gene predicted by a single gene prediction program is also classified as a probable 'hypothetical' protein and is included as a miscellaneous feature of the sequence.

The orientation of the sequence is from -21M13 to M13rev of the BAC clone. This sequence of B1054C11 clone has an overlap with B1106B03 (DDBJ: AP006449) clone at 5' end and an overlap with B1043F11 (DDBJ: AP006156) clone at 3' end. Detailed information on overlap and assembly quality together with annotation of this entry is available at <http://rgp.dna.affrc.go.jp/Genomeseq.html>

# FEATURES

## source

# TITLE

This sequence was finished as follows unless otherwise noted:  
all regions were double stranded, sequenced with an alternate  
chemistry, or covered by high quality data (i.e., phred quality >=  
30); an attempt was made to resolve all sequencing problems, such  
as compressions and repeats; all regions were covered by sequence  
from more than one subclone; and the assembly was confirmed by  
restriction digest.

## MAPPING INFORMATION:

Mapping information for this clone was provided by Dr. John D.  
McPherson, Department of Genetics, Washington University, St. Louis  
MO. For additional information about the map position of this  
sequence, see <http://genome.wustl.edu/gsc>

## SOURCE INFORMATION:

The RPCI-11 human BAC library was made from the blood of one male  
donor, as described by Osoegawa, K., Woon, P. Y., Zhao, B., Frengen, E.,  
Tateno, M., Catanese, J. J., and de Jong, P. J. (1998) An improved  
approach for construction of bacterial artificial chromosome  
libraries. *Genomics* 51:1-8. The clone may be obtained either from  
Research Genetics, Inc. (<http://www.resgen.com>) or Pieter de Jong  
and coworkers at the Roswell Park Cancer Institute  
(<http://bacpac.med.buffalo.edu>)

VECTOR: pBACe3.6

## NEIGHBORING SEQUENCE INFORMATION:

Actual start of this clone is at base position 1 of RP11-724M22;  
actual end is at base position 150013 of RP11-724M22.

Direct Submission

Submitted (05-JUL-2001) Takuji Sasaki, National Institute of

Agrobiological Sciences, Rice Genome Research Program; Kannondai

2-1-2, Tsukuba, Ibaraki 305-8602, Japan

(E-mail: tsusakiana@affrc.go.jp, URL: http://rgp.dna.affrc.go.jp/,

Tel: 81-298-38-7441, Fax: 81-298-38-7468)

On Apr 16, 2002 this sequence version replaced gi:16904699.

Genes were predicted from the integrated results of the following:

GENSCAN (http://ccr-081.mit.edu/GENSCAN.html), GENESH

(http://www.softberry.com/), GeneMark.hmm

(http://opal.biology.gatech.edu/GeneMark/), Glimmer

(http://www.tigr.org/tdb/glimmer/glimr form.html), RiceHMM

(http://rgp.dna.affrc.go.jp/RiceHMM/), SplicePredictor

(http://bioinformatics.iastate.edu/cgi-bin/sp.cgi), sim4

(http://globin.cse.psu.edu/html/docs/sim4.html), gap2

(http://www.tigr.org/software/glimmer/), BLASTN and BLASTX. The

genomic sequence was searched against NCBI NonRedundant Protein

database, nr (ftp://ncbi.nlm.nih.gov/blast/db) and the cDNA

sequence database at RGP or DDBJ. Protein homologies of the coding

regions were searched against NCBI NonRedundant Protein database with BLASTP. ESTs represent the identified cDNA sequences using BLASTN with the corresponding DDBJ accession no. and RGP clone ID. Full-length cDNAs represent the identified cDNA sequences using BLASTN with the corresponding DDBJ accession no.

A gene with identity or significant homology to a protein is classified based on the protein name to indicate the homology level such as same name, 'putative-' and '-like protein'. A gene without significant homology to any protein but with full-length cDNA or EST homology (covering almost the entire length of partial sequence) is classified as an 'unknown' protein. A gene predicted by two or more gene prediction programs is classified as a 'hypothetical' protein according to IRGSP standard. A gene predicted by a single gene prediction program is also classified as a probable 'hypothetical' protein and is included as a miscellaneous feature of the sequence.

The orientation of the sequence is from SP6 to T7 of the PAC clone. This sequence of P0697D09 clone has an overlap with P0503E05 (DDBJ: AP003021) clone at 5' end. Detailed information on overlap and assembly quality together with annotation of this entry is available at <http://rgp.dna.affrc.go.jp/GenomesSeq.html>.

TITLE	Direct Submission								
JOURNAL	Submitted (06-DEC-2000) Takuji Sasaki, National Institute of Agrobiological Sciences, Rice Genome Research Program; Kannondai 2-1-2, Tsukuba, Ibaraki 305-8602, Japan								
COMMENT	(E-mail: tsasaki@nias.affrc.go.jp, URL: http://rgp.dna.affrc.go.jp/, Tel: 81-298-38-7441, Fax: 81-298-38-7468) On Mar 28, 2001 this sequence version replaced gi:11602828. Genes were predicted from the integrated results of the following: GENSCAN (http://CCR-081.mit.edu/GENSCAN.html), FGENESH (http://opal.biology.gatech.edu/Genemark/), GlimmerH (http://www.tigr.org/tdb/glimmer/glmr.form.html), RiceHMM (http://rgp.dna.affrc.go.jp/RiceHMM/), SlicerPredictor (http://bioinformatics.iastate.edu/cgi-bin/sp.cgi), sim4 (http://globin.cse.psu.edu/html/docs/sim4.html), gap2 (http://www.tigr.org/software/glimmer/), BLASTN and BLASTX. The genomic sequence was searched against NCBI Nonredundant Protein database, nr (ftp://ncbi.nlm.nih.gov/blast/db) and the cDNA sequence database at RGP or DDBJ. Protein homologues of the coding regions were searched against NCBI Nonredundant Protein database with BLASTP. ESTs represent the identified cDNA sequences using BLASTN with the corresponding DDBJ accession no. and RGP clone ID. Full-length cDNAs represent the identified cDNA sequences using BLASTN with the corresponding DDBJ accession no. A gene with identity or significant homology to a protein is classified based on the protein name to indicate the homology level such as same name, 'putative-' and '-like protein'. A gene without significant homology to any protein but with full-length cDNA or EST homology (covering almost the entire length of partial sequence) is classified as an 'unknown' protein. A gene predicted by two or more gene prediction programs is classified as a 'hypothetical' protein according to IRGSP standard. A gene

predicted by a single gene prediction program is also classified as a probable 'hypothetical' protein and is included as a miscellaneous feature of the sequence.  
The orientation of the sequence is from T7 to SP6 of the PAC clone. This sequence of P0503E05 clone has an overlap with P0460H02 (DDBJ: AP003257) clone at 5' end and with P0697D09 (DDBJ: AP003856) clone at 3' end. Detailed information on overlap and assembly quality together with annotation of this entry is available at <http://rgp.dna.affrc.go.jp/GenomeSeq.html>.

NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.

#### MAPPING INFORMATION:

Mapping information for this clone was provided by Dr. Wes Warren, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see <http://genome.wustl.edu>

#### SOURCE INFORMATION:

The RPCI-23 BAC Library has been constructed by Kazutoyo Osegawa and Minako Tatenio in the laboratory of Pieter de Jong (<http://www.chori.org>) from female C57BL/6J mouse kidney and/or brain genomic DNA. The clone and detailed information can be obtained from Research Genetics, Inc. (<http://www.resgen.com>) or Pieter de Jong and coworkers at <http://www.chori.org>

#### NEIGHBORING SEQUENCE INFORMATION:

This sequence is the entire insert of the clone.

of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA  
 On Nov 20, 2002 this sequence version replaced gi:23196239.  
 The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (<http://www.hgsc.bcm.tmc.edu/projects/rat/>). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

 ----- Project Information  
 Center project name: RAFO  
 Center clone name: CH230-342K24

----- Summary Statistics

Assembly program: Phrap; version 0.990329  
 Consensus quality: 158599 bases at least Q40  
 Consensus quality: 160475 bases at least Q30  
 Consensus quality: 161407 bases at least Q20  
 Estimated insert size: 161556; sum-of-contigs estimation  
 Quality coverage: 6x in Q20 bases; sum-of-contigs estimation

-----  
 \* NOTE: Estimated insert size may differ from sequence length  
 \* (see [http://www.hgsc.bcm.tmc.edu/docs/genbank\\_draft\\_data.html](http://www.hgsc.bcm.tmc.edu/docs/genbank_draft_data.html)).  
 \* NOTE: This is a 'working draft' sequence. It currently consists of 2 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown.  
 \* This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

\* 1 165449: contig of 165449 bp in length  
 \* 165450 165549: gap of unknown length  
 \* 165550 170956: contig of 5407 bp in length.

 TITLE Direct Submission  
 JOURNAL Submitted (17-FEB-2004) Genome Sciences, Lawrence Berkeley National  
 Laboratory, 1 Cyclotron Rd., Berkeley, CA 94720, USA

Sequence Produced by Berkeley PGA  
 Web site: <http://pga.lbl.gov>  
 Center Code: PGABERK  
 Center Project Name: O148  
 Bac Clone Name: LB3-44H21

This sequence has been compared to sequences of other species  
 using Vista (<http://www-gsd.lbl.gov/VISTA>). The results can be  
 viewed at:  
[http://pga.lbl.gov/cgi-bin/search\\_cvcgd?type=nt&value=LIPC](http://pga.lbl.gov/cgi-bin/search_cvcgd?type=nt&value=LIPC)

The order-orientation of the draft sequence was accomplished by  
 using:  
 Avid (<http://baboon.math.berkeley.edu/mavid/>),  
 Lagan (<http://lagan.stanford.edu/>) and paired end information.

Funding agent: Programs for Genomic Applications (NHUBI)

If the Bac Library Name is LBL to LBL4, please see website  
 for the description: <http://www-gsd.lbl.gov/cheng/BAC.html>  
 These libraries are available through the BACPAC Resources Center:  
<http://www.chori.org/bacpac/libraryres.htm> as LBNL-1 to LBNL-4.

#### Summary Statistics:

Sequencing vector: plasmid; pUC18  
 Chemistry: Dye-terminator Big Dye  
 Assembly program: Phrap version 0.950329.  
 \* NOTE: This is a 'working draft' sequence. It currently  
 \* consists of 7 contigs. Gaps between the contigs  
 \* are represented as runs of N. The order of the pieces  
 \* is believed to be correct as given, however the sizes  
 \* of the gaps between them are based on estimates that have  
 \* provided by the submitter.  
 \* This sequence will be replaced  
 \* by the finished sequence as soon as it is available and  
 \* the accession number will be preserved.  
 \* 1 1086: contig of 1086 bp in length  
 \* 1087 1186: gap of unknown length  
 \* 1187 17979: contig of 16793 bp in length  
 \* 17980 18079: gap of unknown length  
 \* 18080 60719: contig of 42640 bp in length  
 \* 60820 60819: gap of unknown length  
 \* 60820 73619: contig of 12800 bp in length  
 \* 73620 73719: gap of unknown length  
 \* 73720 87458: contig of 13739 bp in length  
 \* 87459 87558: gap of unknown length  
 \* 87559 166569: contig of 79011 bp in length  
 \* 166570 166669: gap of unknown length  
 \* 166670 176362: contig of 9693 bp in length.

#### COMMENT

During sequence assembly data is compared from overlapping clones.  
 Where differences are found these are annotated as variations  
 together with a note of the overlapping clone name. Note that the  
 variation annotation may not be found in the sequence submission  
 corresponding to the overlapping clone, as we submit sequences with  
 only a small overlap as described above.  
 This sequence was finished as follows unless otherwise noted: all  
 regions were either double-stranded or sequenced with an alternate  
 chemistry or covered by high quality data (i.e., phred quality >=  
 30); an attempt was made to resolve all sequencing problems, such  
 as compressions and repeats; all regions were covered by at least  
 one plasmid subclone or more than one M13 subclone; and the  
 assembly was confirmed by restriction digest, except on the rare  
 occasion of the clone being a YAC.  
 The following abbreviations are used to associate primary accession

numbers given in the feature table with their source databases:  
 En: EMBL, Sw: SWISSPROT, Tr: TREMBL, Wp: WORMPEP; Information  
 on the WORMPEP database can be found at

 -----  
 Draft Sequence Produced by Whitehead Institute/MIT Center for  
 Genome Research, 320 Charles Street,  
 Cambridge, MA 02141, USA  
<http://www-seq.wi.mit.edu>

This sequence was finished as follows unless otherwise noted: all  
 regions were either double-stranded or sequenced with an alternate  
 chemistry or covered by high quality data (i.e., phred quality >=  
 30); an attempt was made to resolve all sequencing problems, such  
 as compressions and repeats; all regions were covered by at least  
 one subclone; and the assembly was confirmed by restriction digest,  
 except on the rare occasion of the clone being a YAC.

 Center clone name: 17 E 12  
 ----- Summary Statistics  
 Sequencing vector: M13; M7815; 100% of reads  
 Chemistry: Dye-terminator Big Dye; 100% of reads  
 Assembly program: Phrap; version 0.960731  
 Consensus quality: 150637 bases at least Q40  
 Consensus quality: 166570 bases at least Q30

Consensus quality: 173803 bases at least Q20  
Insert size: 182000; agarose-fp  
Insert size: 178212; sum-of-contigs  
Quality coverage: 4.0 in Q20 bases; agarose-fp  
Quality coverage: 4.1 in Q20 bases; sum-of-contigs

-----  
\* NOTE: This is a 'working draft' sequence. It currently  
\* consists of 10 contigs. The true order of the pieces  
\* is not known and their order in this sequence record is  
\* arbitrary. Gaps between the contigs are represented as  
\* runs of N, but the exact sizes of the gaps are unknown.  
\* This record will be updated with the finished sequence.  
\* as soon as it is available and the accession number will  
\* be preserved.

1 3511: contig of 3511 bp in length  
\* 3512: gap of 100 bp  
\* 3612: contig of 3092 bp in length  
\* 6703: gap of 100 bp  
\* 6704: contig of 5633 bp in length  
\* 12436: gap of 100 bp  
\* 12437: 12536: gap of 100 bp  
\* 12537: 18649: contig of 6113 bp in length  
\* 18650: 18749: gap of 100 bp  
\* 31179: contig of 12430 bp in length  
\* 31279: gap of 100 bp  
\* 44707: contig of 13428 bp in length  
\* 44807: gap of 100 bp  
\* 69716: contig of 24909 bp in length  
\* 69816: gap of 100 bp  
\* 99052: contig of 29236 bp in length  
\* 99152: gap of 100 bp  
\* 12097: contig of 32945 bp in length  
\* 132098: 132197: gap of 100 bp  
\* 132198: 179112: contig of 46915 bp in length.

            ----- Genome Center
            Center: NIH Intramural Sequencing Center
            Center code: NISC
            Web site: http://www.nisc.nih.gov
            Contact: nisc_mouse@hgri.nih.gov
            ----- Project Information
            Center project name: ctb
            Center clone name: 035K06

The sequence data in this record represents an 'enhanced'
version of a Phase 2 submission. Specifically, the indicated
order and orientation of each sequence contig has been
established using one or more of the following: read-pair
data from individual subclones, overlaps with neighboring
clones, alignment with available reference sequence (e.g.,
human), and/or confirmation by PCR testing. In addition,
the sequence assembly is based on at least 8X average
coverage in Q20 bases and has been reviewed to rule out
gross misassemblies, the low-quality ends of sequence
contigs have been trimmed away, and each base is associated
with a Phrap-derived quality score.
----- Summary Statistics
Sequencing vector: plasmid; n/a; 100% of reads
Chemistry: Dye-terminator Big Dye; 100% of reads

```

Assembly program: Phrap; version 0.990319  
Consensus quality: 181870 bases at least Q40  
Consensus quality: 182166 bases at least Q30  
Consensus quality: 182301 bases at least Q20  
Insert size: 165000; agarose-fp  
Insert size: 182309; sum-of-contigs  
Quality coverage: 11.37x in Q20 bases; agarose-fp  
Quality coverage: 10.29x in Q20 bases; sum-of-contigs

-----  
\* NOTE: This is a 'working draft' sequence. It currently  
consists of 5 contigs. Gaps between the contigs  
are represented as runs of N. The order of the pieces  
is believed to be correct as given, however the sizes  
of the gaps between them are based on estimates that have  
provided by the submittor.  
\* This sequence will be replaced  
\* by the finished sequence as soon as it is available and  
\* the accession number will be preserved.

AUTHORS      3 (bases 1 to 185079)
TITLE        Rat Genome Sequencing Consortium.
JOURNAL      Direct Submission
             Submitted (20-NOV-2002) Human Genome Sequencing Center, Department
             of Molecular and Human Genetics, Baylor College of Medicine, One
             Baylor Plaza, Houston, TX 77030, USA
COMMENT      On Nov 20, 2002 this sequence version replaced gi:22855833.
             The sequence in this assembly is a combination of BAC based reads
             and whole genome shotgun sequencing reads assembled using Atlas
             (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
             in the feature table below represents a scaffold in the Atlas
             assembly (a 'contig-scaffold'). Within each contig-scaffold,
             individual sequence contigs are ordered and oriented, and separated
             by sized gaps filled with Ns to the estimated size. The sequence
             may extend beyond the ends of the clone and there may be sequence
             contigs within a contig-scaffold that consist entirely of whole
             genome shotgun sequence reads. Both end sequences and whole genome
             shotgun sequence only contigs will be indicated in the feature
             table.

COMMENT
On May 29, 2002 this sequence version replaced gi:21206073.
INFORMATION: http://www.hgsc.bcm.tmc.edu/ or email
gc-help@bcm.tmc.edu

CLONE LENGTH: This sequence does not necessarily represent the
entire insert of this clone. Overlapping regions of clones are only
sequenced and submitted once, so the sequence for the remainder of
the insert may be found in the record for the adjacent clones.
Overlapping clones are noted at the beginning and end of the
Features listing.

ANNOTATION OF FEATURES:
STSs are identified using ePCR (Genome Res. 7:541-550) searches
of a local database that includes entries from dbSTS, GDB, and
local mapping efforts.
Repeats are identified using RepeatMasker (A. Smit and P. Green,
unpublished.) for Human and Mouse sequences.
Genes and Region of sequence similarity are identified by BLAST
(Nuc. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the
EST and cDNA sequences. Genes demonstrate at least two exons
flanked by consensus splice sites that maintained sequence
continuity across the splice junctions. Sequences that are not
identical matches are annotated as similar.

SEQUENCING READ COVERAGE: Sequencing is completed to a minimum
standard of double strand coverage with a minimum of 2 clones and 2
reads with no ambiguities or 2 chemistries with a minimum of 2
clones and 3 reads with no ambiguities. If the sequence quality for
a region does not meet this standard, it will be indicated in the
annotation as Low Coverage.

QUALITY OF INDIVIDUAL BASES: This sequence meets stringent quality
standards - estimated error rate less than 1 per 10,000 bases.
Reports of lowest quality individual bases and measures of base
quality are listed below. Description of the metrics can be found
at URL:
http://gc.bcm.tmc.edu:8088/quality.info/genbank.annotation.html.

NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.

MAPPING INFORMATION:  
Mapping information for this clone was provided by Dr. Wes Warren, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see <http://genome.wustl.edu>

#### SOURCE INFORMATION:

The RPCI-24 BAC Library has been constructed by Pieter de Jong and coworkers (<http://www.chori.org>) from male C57BL/6J mouse spleen and/or brain genomic DNA. The clone and detailed information can be obtained from Pieter de Jong and coworkers at <http://www.chori.org>

#### NEIGHBORING SEQUENCE INFORMATION:

This sequence is the entire insert of the clone. This clone is overlapped by AC115118.

Grovmont Circle, Gaithersburg, MD 20877, USA
On Mar 13, 2002 this sequence version replaced gi:16303428.
----- Genome Center
Center: NIH Intramural Sequencing Center
Center code: NISC
Web site: http://www.nisc.nih.gov
Contact: nisc.mouse@nhgri.nih.gov
----- Project Information
Center project name: ctc
Center clone name: 265A21
The sequence data in this record represents an 'enhanced'
version of a Phase 2 submission. Specifically, the indicated
order and orientation of each sequence contig has been
established using one or more of the following: read-pair
data from individual subclones, overlaps with neighboring
clones, alignment with available reference sequence (e.g.,
human), and/or confirmation by PCR testing. In addition,
the sequence assembly is based on at least 8x average
coverage in Q20 bases and has been reviewed to rule out
gross misassemblies, the low-quality ends of sequence
contigs have been trimmed away, and each base is associated
with a Phrap-derived quality score.
----- Summary Statistics
Sequencing vector: plasmid; n/a; 100% of reads
Chemistry: Dye-terminator Big Dye; 100% of reads
Assembly program: Phrap; version 0.990319
Consensus quality: 195502 bases at least Q40
Consensus quality: 196012 bases at least Q30
Consensus quality: 196230 bases at least Q20
Insert size: 174000; agarose-fp
Insert size: 196300; sum-of-contigs
Quality coverage: 10.63x in Q20 bases; agarose-fp
Quality coverage: 9.42x in Q20 bases; sum-of-contigs
-----
```

\* NOTE: This is a 'working draft' sequence. It currently consists of 5 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have been provided by the submitter.

\* This sequence will be replaced  
 \* by the finished sequence as soon as it is available and  
 \* the accession number will be preserved.  
 \* 1 61967: contig of 61967 bp in length  
 \* 61968 62067: gap of unknown length  
 \* 62068 128700: contig of 66633 bp in length  
 \* 128701 128800: gap of unknown length  
 \* 128801 144849: contig of 16049 bp in length  
 \* 144850 144949: gap of unknown length  
 \* 144950 169039: contig of 24090 bp in length  
 \* 169040 169139: gap of unknown length  
 \* 169140 196700: contig of 27561 bp in length.

```

This sequence was finished as follows unless otherwise noted:  
all regions were double-stranded, sequenced with an  
alternate chemistry, or covered by high quality data  
(i.e., phred quality >= 30); an attempt was made to resolve  
all sequencing problems, such as compressions and repeats;  
all regions were covered by at least one plasmid subclone  
or more than one M13 subclone; and the assembly was confirmed  
by restriction digest.

CLONE LENGTH: This sequence represents the entire insert of  
this clone unless otherwise noted. If there are overlapping  
clones, the overlaps are noted in the beginning and end of  
the features section.

----- Project Information
Center project name: gud
Center clone name: 335K11

The sequence data in this record represents an 'enhanced'
version of a Phase 2 submission. Specifically, the indicated
order and orientation of each sequence contig has been
established using one or more of the following: read-pair
data from individual subclones, overlaps with neighboring
clones, alignment with available reference sequence (e.g.,
human), and/or confirmation by PCR testing. In addition,
the sequence assembly is based on at least 8X average
coverage in Q20 bases and has been reviewed to rule out

```

gross misassemblies, the low-quality ends of sequence contigs have been trimmed away, and each base is associated with a Phrap-derived quality score.

----- Summary Statistics

Sequencing vector: plasmid; n/a; 100% of reads  
 Chemistry: Dye-terminator Big Dye; 100% of reads  
 Assembly program: Phrap; version 0.990319  
 Consensus quality: 215445 bases at least Q40  
 Consensus quality: 216320 bases at least Q30  
 Consensus quality: 216749 bases at least Q20  
 Insert size: 203000; agarose-fp  
 Quality coverage: 9.44x in Q20 bases; agarose-fp  
 Quality coverage: 8.83x in Q20 bases; sum-of-contigs

-----  
 \* NOTE: This is a 'working draft' sequence. It currently  
 \* consists of 7 contigs. Gaps between the contigs  
 \* are represented as runs of N. The order of the pieces  
 \* is believed to be correct as given, however the sizes  
 \* of the gaps between them are based on estimates that have  
 \* provided by the submitter.

\* This sequence will be replaced  
 \* by the finished sequence as soon as it is available and  
 \* the accession number will be preserved.

Submitted (13-NOV-2002) Human Genome Sequencing Center, Department
of Molecular and Human Genetics, Baylor College of Medicine, One
Baylor Plaza, Houston, TX 77030, USA
On Nov 13, 2002 this sequence version replaced gi:23603910.
The sequence in this assembly is a combination of BAC based reads
and whole genome shotgun sequencing reads assembled using Atlas
(http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
in the feature table below represents a scaffold in the Atlas
assembly (a 'contig-scaffold'). Within each contig-scaffold,
individual sequence contigs are ordered and oriented, and separated
by sized gaps filled with Ns to the estimated size. The sequence
may extend beyond the ends of the clone and there may be sequence
contigs within a contig-scaffold that consist entirely of whole
genome shotgun sequence reads. Both end sequences and whole genome
shotgun sequence only contigs will be indicated in the feature
table.

**AUTHORS**  
**TITLE** Rat Genome Sequencing Consortium.  
**JOURNAL** Direct Submission  
 Submitted (19-NOV-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA  
**COMMENT** The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

 Assembly program: Phrap; version 0.990329  
 Consensus quality: 201261 bases at least Q40  
 Consensus quality: 206093 bases at least Q30  
 Consensus quality: 208911 bases at least Q20  
 Estimated insert size: 209892; sum-of-contigs estimation  
 Quality coverage: 6x in Q20 bases; sum-of-contigs estimation

-----  
 NOTE: Estimated insert size may differ from sequence length  
 (see http://www.hgsc.bcm.tmc.edu/docs/Genbankdraftdata.html).  
 NOTE: This is a 'working draft' sequence. It currently consists of 4 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

Rat Genome Sequencing Consortium.  
Direct Submission  
Submitted (15-NOV-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

On Nov 15, 2002 this sequence version replaced gi:23269678.  
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (<http://www.hgsc.bcm.tmc.edu/projects/rat/>). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

COMMENT * NOTE: This is a 'working draft' sequence. It currently
* consists of 2 contigs. Gaps between the contigs
* are represented as runs of N. The order of the pieces
* is believed to be correct as given, however the sizes
* of the gaps between them are based on estimates that have
* provided by the submittor.
* This sequence will be replaced
* by the finished sequence as soon as it is available and
* the accession number will be preserved.
* 1 12938: contig of 12938 bp in length
* 12939 13038: gap of unknown length
* 13039 67767: contig of 54729 bp in length.

This is a finished sequence consisting of 1 contig high quality.
The BAC clone contains flowering locus C gene and located on the
cytogenetic chromosome 10 by genetic map and FISH analyses.

-----  
This sequence was finished as follows unless otherwise noted: all  
regions were either double-stranded or sequenced with an alternate  
chemistry or covered by high quality data (i.e., phred quality >=  
30); an attempt was made to resolve all sequencing problems, such  
as compressions and repeats; all regions were covered by at least  
one subclone; and the assembly was confirmed by restriction digest,  
except on the rare occasion of the clone being a YAC.

Worley,K.C.	
Direct Submission	
Submitted (29-MAY-2005) Human Genome Sequencing Center, Baylor	
College of Medicine, One Baylor Plaza, Houston, TX 77030, USA	
On May 29, 2005 this sequence version replaced gi:66773448.	
Sequencing is completed to a minimum standard of double strand	
coverage with a minimum of 2 clones and 2 reads with no ambiguities	
or 2 chemistries with a minimum of 2 clones and 3 reads with no	
ambiguities. If the sequence quality does not meet this standard,	
it will be indicated in the annotation.	
The repeat regions shown were identified using RepeatMasker by	
Adrian Smit.	
Sequence similarities were identified using PowerBlast by Jinghui	
Zhang.	
Exon/Intron boundaries of identified genes were chosen if there	
were canonical splice junctions that maintained sequence continuity	
across the splice junctions.

Contact: [nisc.zoo@nhgri.nih.gov](mailto:nisc.zoo@nhgri.nih.gov)

----- Project Information

Center project name: gte

Center clone name: 190B16

This sequence was finished as follows unless otherwise noted:  
 all regions were double-stranded, sequenced with an  
 alternate chemistry, or covered by high quality data  
 (i.e., phred quality >= 30); an attempt was made to resolve  
 all sequencing problems, such as compressions and repeats;  
 all regions were covered by at least one plasmid subclone  
 or more than one M13 subclone; and the assembly was confirmed  
 by restriction digest.

CLONE LENGTH: This sequence represents the entire insert of  
 this clone unless otherwise noted. If there are overlapping  
 clones, the overlaps are noted in the beginning and end of  
 the Features section.

\* NOTE: This is a 'working draft' sequence. It currently  
 \* consists of 7 contigs. The true order of the pieces  
 \* is not known and their order in this sequence record is  
 \* arbitrary. Gaps between the contigs are represented as  
 \* runs of N, but the exact sizes of the gaps are unknown.  
 \* This record will be updated with the finished sequence  
 \* as soon as it is available and the accession number will  
 \* be preserved.

1 107127: contig of 107127 bp in length  
 \* 107128: gap of 100 bp  
 \* 107228: contig of 13045 bp in length  
 \* 120273: gap of 100 bp  
 \* 120373: gap of 100 bp  
 \* 120378: contig of 25044 bp in length  
 \* 145417: gap of 100 bp  
 \* 145517: contig of 20505 bp in length  
 \* 166022: gap of 100 bp  
 \* 166122: contig of 37245 bp in length  
 \* 203367: gap of 100 bp  
 \* 203467: contig of 4812 bp in length  
 \* 208279: gap of 100 bp  
 \* 208379: contig of 23065 bp in length.

 Worley, K.C.  
 Direct Submission  
 Submitted (28-MAY-2005) Human Genome Sequencing Center, Baylor  
 College of Medicine, One Baylor Plaza, Houston, TX 77030, USA  
 On May 28, 2005 this sequence version replaced gi:66392614.  
 Sequencing is completed to a minimum standard of double strand  
 coverage with a minimum of 2 clones and 2 reads with no ambiguities  
 or 2 chemistries with a minimum of 2 clones and 3 reads with no  
 ambiguities. If the sequence quality does not meet this standard,  
 it will be indicated in the annotation.

The repeat regions shown were identified using RepeatMasker by  
 Adrian Smit.

Sequence similarities were identified using Powerblast by Jinghui  
 Zhang.

Exon/Intron boundaries of identified genes were chosen if there  
 were canonical splice junctions that maintained sequence continuity

across the splice junctions.

XX PT New nucleic acid molecule encoding a human G-protein coupled receptor.  
PT RAI3, useful for preventing, treating or ameliorating chronic obstructive  
PT pulmonary disease (COPD), COPD-like disorder, or the underlying symptoms

PT of COPD.  
XX Disclosure; SEQ ID NO 32; 301pp; English.  
PS The present sequence is that of an antisense PCR primer based on DNA  
XX encoding a peptide ADI28458 from human G-protein coupled receptor  
CC retinoic acid induced 3 (RAI-3) ADI28460. The peptide was identified in  
CC studies of RAI-3 phosphorylation in response to cigarette smoke. The  
CC primer can be used in a PCR to identify individuals at risk for  
CC developing chronic obstructive pulmonary disease (COPD). RAI-3 is  
CC tyrosine phosphorylated and/or is associated/complexed with tyrosine  
CC phosphorylated proteins only in cells that have been exposed to cigarette  
CC smoke. Since RAI-3 is primarily expressed in lung tissue, and since a  
CC cigarette smoke is a major causative factor of COPD, RAI-3 provides a  
CC novel cellular target for identifying modulators, e.g. agonists or  
CC antagonists, useful for the treatment and/or prevention of COPD and  
CC related disorders such as emphysema and chronic bronchitis. RAI-3  
CC modulators, e.g. agonists and antagonists, especially antisense  
CC compounds, can be used to treat COPD and other disorders an diseases  
CC associated with regulation of NF-kB and/or its associated or interacting  
CC signaling molecules. Single nucleotide polymorphisms (SNPs) detected in  
CC the RAI-3 gene are useful for determining COPD association in  
CC individuals. RAI-3 nucleic acid molecules and polypeptides are useful for  
CC preventing, treating or ameliorating disorders related to aberrant GPCR  
CC signaling or cell cycle regulation, pulmonary disorders, inflammatory  
CC lung disorders, COPD, the underlying symptoms of COPD, COPD-related  
CC disorders or conditions, autoimmune disorders, disorders related to  
CC hyperimmune activity, inflammatory conditions, disorders related to  
CC aberrant acute phase responses, hypercongenital conditions, birth  
CC defects, necrotic lesions, wounds, organ transplant rejection, renal  
CC diseases, ischaemia-reperfusion injury, heart disorders, disorders  
CC related to aberrant signal transduction, proliferation disorders,  
CC cancers, HIV infection, asthma, cystic fibrosis, pulmonary fibrosis,  
CC ulcerative colitis, cerebral infarct, myocardial infarct, diabetic  
CC nephropathy, allergic rhinitis, Crohn's disease, atherosclerosis,  
CC rheumatoid arthritis, inflammatory/autoimmune disorders, glioblastoma,  
CC pulmonary small cell undifferentiated carcinoma, carcinoma of the breast,  
CC colon, lung, ovary, pancreas, prostate, non-Hodgkin's lymphoma, disorders  
CC associated with aberrant cell adhesion, I-CAM function and/or regulation,  
CC E-selectin function and/or regulation, or aberrant NF-kB function and/or  
XX regulation (all claimed).

XX
XX New isolated nucleic acids and polypeptides capable of eliciting a
XX humoral and/or cellular immune response, useful for diagnosing,
XX preventing or treating cancer, particularly colon cancer.
XX
XX Claim 1; SEQ ID NO 1937; 87pp; English.
XX
XX The invention relates to polynucleotide and polypeptide sequences
XX associated with cancer, particularly colon cancer. Also disclosed are (i)
XX an expression vector comprising the polynucleotide, (ii) a host cell
XX transformed or transfected with the expression vector, (iii) an isolated
XX antibody, or its antigen-binding fragment, which specifically binds to
XX the polypeptide, (iv) a method of detecting or determining the presence
XX of cancer in a patient, (v) a fusion protein comprising at least one of
XX the polypeptides, (vi) an oligonucleotide that hybridises to the
XX polynucleotide sequence under highly stringent conditions, and (vii) a
XX method of stimulating and/or expanding T cells specific for a tumour
XX protein. The polypeptide specifically comprises the amino acid sequence
XX of C634S, C635S, C637S, C640S, C636S or one of the potential open reading
XX frames (ORFs) of C636S. These polypeptides are encoded by the
XX polynucleotide sequences, where both are capable of eliciting a humoral
XX and/or cellular immune response. The polynucleotides, polypeptides, and
XX antibodies are useful for diagnosing, preventing or treating cancer,
XX particularly colon cancer. The polynucleotide and polypeptide sequences
XX are also useful in DNA strand invasion, antisense inhibition, mutational
XX analysis, nucleic acid purification, isolation of transcriptionally
XX active genes, blocking or transcription factor binding, genome cleavage
XX or in situ hybridisation, and as enhancers of transcription or
XX biomarkers. This sequence represents a human colon cancer associated
XX cDNA. Note: The sequence data for this patent was obtained in electronic
XX format directly from the USPTO web site at seqdata.uspto.gov

PT Novel human proteins having hydrophobic domains used for research and  
PT diagnostic purposes.  
XX  
PS Claim 3; Page 88; 117pp; English.  
XX  
CC This sequence represents the hydrophobic domain containing protein, clone  
CC HP10549 coding region. The sequence is isolated from a human stomach  
CC cancer cell line. The invention relates to human proteins with  
CC hydrophobic domains, the DNA and the cDNA encoding them. The  
CC polynucleotides and proteins are predicted to have biological activities  
CC which make them suitable for treating, preventing or ameliorating medical  
CC conditions in humans and animals. Suggested activities include  
CC nutritional activity (nutritional source or supplement); cytokine and  
CC cell proliferation/differentiation activity; immune stimulating (e.g. as  
CC vaccines) or suppressing activity (e.g. to treat various immune  
CC deficiencies such as SCIDS or HIV, connective tissue disease, systemic  
CC lupus erythematosus, rheumatoid arthritis, autoimmune pulmonary  
CC inflammation, Guillain-Barre syndrome, autoimmune thyroiditis, insulin  
CC dependent diabetes mellitus, myasthenia gravis, graft-versus-host disease  
CC and autoimmune inflammatory eye disease, as well as asthma, allergies and  
CC organ transplantation); haematopoiesis regulating activity (e.g. in  
CC treatment of myeloid or lymphoid cell deficiencies); tissue growth  
CC activity (e.g. wound healing and tissue repair, ulcers, burns,  
CC periodontal disease); activin/inhibin activity; chemotactic/chemokinetic  
CC activity; haemostatic and thrombolytic activity (e.g. treating  
CC haemophilias); receptor/ligand activity; anti-inflammatory activity; and  
CC tumour inhibition activity. The polynucleotides are also stated to be  
CC useful for gene therapy. Other activities include inhibiting infections  
CC caused by bacteria, fungi, viruses and other parasites (e.g. Hepatitis,  
CC malaria); effecting bodily characteristics such as, e.g. weight, colour,  
CC skin, effecting biorhythms or cardiac cycles; enhancing fertility;  
CC treatment of depression; treatment of pain; hormonal or endocrine  
CC activity. The polynucleotides may also be used for recombinant expression  
CC of the protein

PT New isolated nucleic acid that is differentially expressed in cancer  
PT tissues useful for determining the presence of colon cancer in a cell or  
PT tissue type, and in antisense therapy.  
XX  
PS Claim 1; Fig 1; 796pp; English.  
XX  
CC ABQ56306 to ABQ60787 represent isolated nucleic acids (I) differentially  
CC expressed in cancer tissues. ABQ78993 to ABQ79004 represent proteins  
CC encoded by the ABQ60776 to ABQ60787 nucleic acid sequences. (I) can be  
CC used in antisense therapy. An antibody immunoreactive with a polypeptide  
CC encoded by (I) is useful for detecting cancer in a patient sample, and  
CC for detecting the presence or absence of a polynucleotide encoded by a  
CC nucleic acid which hybridises to (I) in a cell. A probe/primer derived  
CC from (I) can be used for determining the presence of a nucleic acid which  
CC hybridises to (I), and for determining the phenotype of cells in a sample  
CC of cells from a patient. (I) is useful for determining the presence of  
CC colon cancer in a cell or tissue type, for determining the presence or  
CC state of other type of cancer, in antisense therapy, to generate  
CC macroarrays on a solid surface, to identify a chromosome on which the  
CC corresponding gene resides, and in tissue profiling, forensics, genetic  
CC analysis, mapping and diagnostic applications. (I) can be used to raise  
CC antibodies, and to screen for peptide analogues and antagonists

XX Novel isolated polypeptide encoded by breast cancer marker gene, useful  
 PT for diagnosing, staging, monitoring, prognosing and treating diseases  
 PT associated with breast cancer.

XX Disclosure; Page 187-188; 725pp; English.

XX The invention relates to an isolated polypeptide encoded by a breast  
 CC cancer marker gene comprising any of 1417 21-805 nucleotide sequences,  
 CC given in the specification. The methods of the invention are useful for  
 CC diagnosing patients having an identified breast mass or symptoms  
 CC associated with breast cancer, to diagnose breast cancer or its  
 CC precursors, and for monitoring the efficacy of treatment of a breast  
 CC cancer patient (e.g. efficacy of chemotherapy). The methods are also  
 CC useful for evaluating a patient before, after or during therapy, to

CC evaluate the reduction in a tumour burden. The breast cancer marker gene  
 CC proteins are useful as immunogens for raising antibodies, by immunising a  
 CC mammal with a breast cancer marker protein. The marker proteins are  
 CC useful as bait proteins in a two-hybrid or three-hybrid assay, to  
 CC identify other proteins which bind to or interact with the marker  
 CC proteins. The breast cancer marker genes are useful as surrogate marker  
 CC genes for one or more disorders, disease states or conditions leading to  
 CC disease states, in particular, breast cancers. The breast cancer marker  
 CC genes are useful as pharmacodynamic marker genes. An antibody which  
 CC selectively binds to a protein of a breast cancer marker gene is useful  
 CC for treating cancers, particularly breast cancers. The host cell of the  
 CC invention is useful for producing non-human transgenic animals. This  
 CC polynucleotide sequence represents one of the breast cancer marker genes  
 CC of the invention

XX Novel mammalian G protein coupled receptors, useful for identifying

PT compounds that modulates diagnosing and treating disease condition

associated with GPCR dysfunction e.g. autoimmune diseases, angina pectoris, Parkinson's disease.

Claim 151; SEQ ID NO 1137; 542pp; English.

The invention relates to human and mouse G protein-coupled receptors (GPCRs) and nucleic acids encoding them. The invention also relates to sequences at least 90% identical to the GPCR proteins and nucleic acids of the invention; methods of treating, preventing or diagnosing diseases associated with GPCRs of the invention; methods of screening for compounds useful in the treatment of GPCR-related diseases; a transgenic mouse comprising a GPCR gene of the invention; a mouse comprising a mutation in a GPCR transgene or in an endogenous GPCR gene; cells derived from the transgenic mice; kits comprising several mice, each of which has a mutation in a different GPCR gene of the invention; and kits comprising probes which hybridise to GPCR polynucleotides of the invention. The invention further discloses variants of the GPCR polypeptides and vectors comprising a GPCR nucleic acid. The GPCR nucleic acids and proteins may be used in the diagnosis, treatment or prevention of a wide variety of diseases including neurological disorders (e.g., Alzheimer's disease, depression, diabetic neuropathy, Parkinson's disease or schizophrenia); disorders of the adrenal gland; disorders of the colon or intestine (e.g., Crohn's disease, diarrhoea, food poisoning or irritable bowel syndrome); cardiovascular disorders (e.g., angina, cardiac arrhythmia or myocardial infarction); muscular disorders; blood disorders (e.g., anaemia or leukaemia); immune disorders (e.g., autoimmune disorders or AIDS); bone and joint disorders (e.g., osteoarthritis, rheumatoid arthritis, gout or osteoporosis); metabolic or nutritive disorders (e.g., obesity, enzyme deficiency-related diseases or vitamin deficiency-related diseases); and disorders of the kidney, liver, lung, breast, ovary, uterus, prostate, testis, skin, stomach, pancreas, spleen, thymus and thyroid (e.g., cancers). The present sequence represents a GPCR-encoding nucleic acid of the invention. Note: The full sequence data for this patent did not form part of the printed specification; those sequences not shown were obtained in electronic format directly from WIPO at [ftp.wipo.int/pub/published\\_pct\\_sequences](http://ftp.wipo.int/pub/published_pct_sequences).

XX Claim 1; Page 155; 235pp; English.

XX The invention relates to novel nucleic acid sequences derived from rat dermal papilla, human keratinocytes and neonatal foreskin fibroblasts, and mouse embryonic skin, keratinocyte stem cells and transit amplifying cells. Polypeptides of the invention may be used to treat inflammation, cancer and neurological diseases. The proteins may be used to stimulate the growth and motility of keratinocytes, to inhibit the growth of cancer cells, to modulate angiogenesis and tumour vascularisation, to modulate skin inflammation, to modulate epithelial cell growth and to inhibit binding of HIV-1 to leukocytes. The invention may also be used to treat growth and developmental defects, skin wounds and hair follicle disorders. Sequences AAZ61606-261832 represent cDNA sequences derived from several mouse, rat or human skin cell types. Sequences AAZ61606-261649, AAZ61725-261765, AAZ61802-261811 and AAZ61826 encode proteins with an N-terminal signal sequence, indicating that the proteins are secreted. Sequences AAZ61650-261668, AAZ61766-261780, AAZ61812-261817 and AAZ61827-261829 encode proteins with one or more putative transmembrane domains

CC probe, for research and diagnostic applications, for monitoring the  
CC expression of several expressed polynucleotides, in the diagnosis and  
CC monitoring of treatment of pancreatic disease, cancer, immunopathology or  
CC neuropathology, for investigating an individual's predisposition to the  
CC above disease, in genetic or gene expression analysis of polynucleotide  
CC sequences, to investigate cellular responses to infection or drug  
CC treatment, as hybridisable array elements in a microarray, to purify a  
CC subpopulation of mRNAs, cDNAs or genomic fragments in a sample, in  
CC diagnostics, prognostics and treatment regimens, in drug discovery and  
CC development, in toxicological and carcinogenicity studies, and in  
CC forensics or pharmacogenomics, to monitor the progression of disease, to  
CC monitor the efficacy of treatment, to diagnose the conditions of the

CC pancreas e.g. diabetes, pancreatic cholera, hyperlipidaemia or  
 CC fibrocystic disease, to diagnose a cancer e.g. leukaemia, adenocarcinoma  
 CC or sarcoma, to diagnose immunopathologies e.g. AIDS, allergies, anaemia,  
 CC asthma or gout, to diagnose neuropathologies e.g. Alzheimer's disease, of  
 CC dementia or Huntington's disease, to rapidly screen large numbers of  
 CC candidate drug molecules and as query sequences against GenBank,  
 CC SwissProt, BLOCKS and PRINTS databases. The combination is employed to  
 CC fine tune the treatment regimen and thus the expression patterns  
 CC associated with undesirable side effects are avoided. The present  
 CC sequence represents a cDNA encoding a fragment of gene encoding human  
 CC membrane-associated proteins, receptors or ion channels

XX PT Novel isolated antibody capable of binding to tumor-associated antigenic  
 PT target polypeptide, useful for treating cell proliferative disorder e.g.  
 PT cancer.

XX XX Claim 1; SEQ ID NO 64; 337pp; English.

XX The invention relates to a novel isolated antibody binding to a  
 CC polypeptide having at least 80% sequence identity to a polypeptide having  
 CC any one of 76 fully defined 182-910 amino acid tumor-associated antigenic  
 CC target polypeptide (TAT) sequences (AEA00127-AEA00202) given in the  
 CC specification, a polypeptide having any one of (AEA00127-AEA00202),  
 CC lacking its associated signal peptide, or an extracellular domain of a  
 CC polypeptide having any one of (AEA00127-AEA00202). The polypeptide is  
 CC encoded by the nucleotide sequence having any one of (AEA00049-AEA00126).  
 CC An antibody of the invention has cytostatic activity. The antibody is  
 CC useful for inhibiting growth of a cell expressing TAT188, which involves  
 CC contacting the cell with the antibody. The cell is a cancer cell chosen  
 CC from breast, colon, rectum, endometrium, kidney, lung, ovary, skin and  
 CC liver cell. The cancer cell is a mammalian cell, preferably a TAT188  
 CC cell. The antibody is also useful for detecting the level of TAT188  
 CC polypeptide expressed in a test cell relative to a control cell, and for  
 CC detecting the level of TAT188 polypeptide or a polypeptide having at  
 CC least 80 % sequence identity to the TAT188 polypeptide sequence in a test  
 CC cell relative to a control cell. The antibody is useful for treating a  
 CC preventing a cell proliferative disorder associated with increased  
 CC expression or activity of a polypeptide having at least 80 % identity to  
 CC a TAT188 polypeptide sequence. The cell proliferative disorder is cancer.  
 CC The method of the invention is useful for inhibiting the growth of a  
 CC cancer cell. The present sequence encodes a polypeptide of the invention.

Novel isolated antibody e.g. anti-E16 or anti-TAT112 antibody that binds to tumor-associated antigenic target polypeptide, useful for diagnosing or treating cancer.

Claim 1; SEQ ID NO 64; 96pp; English.

This invention relates to a novel isolated antibody, for example anti-E16 or anti-TAT112 antibody, that binds to a tumor-associated antigenic target polypeptide (TAT) and that lacks an associated signal peptide sequence. The invention may be useful for the development of compounds with a cytostatic activity acting as antagonists of the TAT188 polypeptide or RNA interference whilst the disclosed sequences may be useful for gene therapy. The invention is useful for inducing the death of a cell (such as a cancer cell chosen from breast, colon, rectum, endometrium, kidney, lung, ovary, skin and liver) to which it binds, inhibiting proliferation or promoting cell death of a cell expressing TAT188. In addition, the invention may be useful for detecting the level of TAT188 polypeptide in a test cell relative to a control cell, or treating or preventing a cell proliferative disorder associated with increased expression of TAT188. The novel antibody of the invention is useful for inhibiting the growth of a cancer cell and may be useful for diagnosing or treating cancer. The present sequence is that of the human TAT143 cDNA which encodes a protein against which an antibody of the invention may be targeted.

Novel receptors and associated proteins for diagnosis and treatment of PT neurological disorders, immunological disorders including autoimmune/ PT inflammatory disorders and cell proliferative disorders such as cancer.

XX Example 5; Page 126-127; 128pp; English.

The present sequence encodes a human RECAP (receptors and associated proteins) polypeptide. RECAP polynucleotides and polypeptides are useful in the diagnosis, treatment and prevention of neurological disorders such as stroke, Alzheimer's disease, Pick's disease, Huntington's disease, dementia, Parkinson's disease, Down's syndrome, amyotrophic lateral sclerosis, multiple sclerosis, bacterial and viral meningitis, CJD (Creutzfeldt-Jakob disease), GSS (Gerstmann -Straussler-Scheinker syndrome); immunological disorders, including autoimmune/inflammatory disorders such as AIDS, DiGeorge's syndrome, severe combined immunodeficiency disease (SCID), Chediak-Higashi syndrome, Cushing's disease, Addison's disease, autoimmune thyroiditis, Crohn's disease, diabetes mellitus, Good pasture's syndrome, gout, Grave's disease, Hashimoto's thyroiditis, Sjogren's syndrome, Werner's syndrome, viral, bacterial, fungal, parasitic, protozoal, and helminthic infections; and cell proliferation disorders such as arteriosclerosis, atherosclerosis, cirrhosis, hepatitis and cancer

XX Novel human proteins having hydrophobic domains used for research and diagnostic purposes.

PS Claim 4; Page 111-113; 117pp; English.

XX This sequence represents the hydrophobic domain containing protein, clone  
CC HP10549 nucleotide sequence. The sequence is isolated from a human  
CC stomach cancer cell line. The invention relates to human proteins with  
CC hydrophobic domains, the DNA and the cDNA encoding them. The  
CC polynucleotides and proteins are predicted to have biological activities  
CC which make them suitable for treating, preventing or ameliorating medical  
CC conditions in humans and animals. Suggested activities include  
CC nutritional activity (nutritional source or supplement); cytokine and  
CC cell proliferation/differentiation activity; immune stimulating (e.g. as  
CC vaccines) or suppressing activity (e.g. to treat various immune  
CC deficiencies such as SCIDS or HIV, connective tissue disease, systemic  
CC lupus erythematosus, rheumatoid arthritis, autoimmune pulmonary  
CC inflammation, Guillain-Barre syndrome, myasthenia gravis, graft-versus-host disease  
CC and autoimmune inflammatory eye disease, as well as asthma, allergies and  
CC organ transplantation); haematopoiesis regulating activity (e.g. in  
CC treatment of myeloid or lymphoid cell deficiencies); tissue growth  
CC activity (e.g. wound healing and tissue repair, ulcers, burns,  
CC periodontal disease); activin/inhibin activity; chemotactic/chemokinetic  
CC activity; haemostatic and thrombolytic activity (e.g. treating  
CC haemophilias); receptor/ligand activity; anti-inflammatory activity; and  
CC tumour inhibition activity. The polynucleotides are also stated to be  
CC useful for gene therapy. Other activities include inhibiting infections  
CC caused by bacteria, fungi, viruses and other parasites (e.g. Hepatitis,  
CC malaria); effecting bodily characteristics such as, e.g. weight, colour,  
CC skin, effecting biorhythms or circadian cycles; enhancing fertility;  
CC treatment of depression; treatment of pain; hormonal or endocrine  
CC activity. The polynucleotides may also be used for recombinant expression  
CC of the protein

PT Diagnosing breast cancer in a patient comprises detecting the level of  
PT gene expression in cell or tissue samples, where a differential gene  
PT expression is indicative of breast cancer.

XX PS Claim 1; SEQ ID NO 307; 260pp + Sequence Listing; English.

XX The present invention relates to methods of diagnosing breast cancer in a  
CC patient, which comprise detecting the level of expression in a tissue  
CC sample of two or more genes selected from those shown in ABT09867-  
CC ABT1112, where a differential expression of the genes indicates breast  
CC progression, and in monitoring treatment of breast cancer in patients.  
CC The methods are also useful as a screening tool for agents that modulate  
CC the onset or progression of breast cancer. The breast cancer genes may be  
CC used as diagnostic markers for the prediction or identification of the  
CC malignant state of breast tissue, for confirming the type and progression  
CC of cancer, and for drug screening and assays. The present sequence is a  
CC coding sequence of the invention. Note: The sequence data for this patent  
CC did not form part of the printed specification, but was obtained in  
CC electronic format directly from WIPO at  
CC ftp.wipo.int/pub.published\_pct\_sequences

PT metabolic disorders, e.g. obesity, anorexia, cachexia or diabetes.  
XX Claim 10; Page 16-17; 150pp; English.  
PS  
XX  
CC The present sequence is that of human G-protein coupled receptor-like  
CC retinoic acid induced gene 1 (GPCR-like RAIG1). This is the human  
CC homologue of murine GPCR-like RAIG1. The murine gene was shown to be  
CC differentially regulated during fasting-feeding cycles in mice, with  
CC moderate induction early in fasting, down-regulation with extended  
CC fasting and 4-fold up-regulation with feeding in recovery from fasting.  
CC The differentially expressed gene, its mRNA, and the encoded protein, can  
CC each be manipulated to detect and treat metabolic disorders associated  
CC with up- or down-regulation of GPCR-like RAIG1 activity, such as obesity,  
CC anorexia, cachexia or diabetes

XX in expression or activity of an RAIG1 polypeptide or encoding nucleic  
XX acid molecule.  
XX  
XX Claim 1; Fig 2; 43pp; English.  
XX  
XX This sequence encodes retinoic acid-inducible gene 1 (RAIG1) polypeptide.

CC RAIG1 is an orphan G-protein coupled receptor (GPCR) located on  
CC chromosome 12. RAIG1 shows a restricted expression pattern compared to a  
CC related receptor, GPCR5B, which is widely expressed in peripheral and  
CC central tissues. The RAIG1 cDNA and polypeptide sequence may be used in  
CC the method of the invention for screening for and/or diagnosis of  
CC carcinoma in a subject, and/or monitoring the effectiveness of carcinoma  
CC therapy. The method comprises detecting and/or quantifying in a  
CC biological sample obtained from the subject an RAIG1 polypeptide and a  
CC nucleic acid molecule. The RAIG1 polypeptide and nucleic acid molecule  
CC are useful in the manufacture of a medicament for the treatment of  
CC carcinoma, where the composition is a vaccine. An agent which interacts  
CC with or causes change in the expression or activity of an RAIG1  
CC polypeptide or nucleic acid molecule, is also useful in the manufacture  
CC of a medicament for the treatment of carcinoma that is breast cancer,  
CC pancreatic cancer, lung cancer, liver cancer, ovarian cancer, colon  
CC cancer and/or osteosarcoma. They can also be used in the diagnosis and  
CC screening of such carcinomas.

XX invention are useful for assessing, modifying, modulating or regulating  
XX intestinal epithelium or M cell development. The DNA sequences of the  
XX invention are also useful in the treatment of: inflammatory bowel

CC disease, gluteenteropathy, infectious diseases, autoimmune diseases  
CC (e.g. haemolytic anaemia, rheumatoid arthritis, dermatitis, Grave's  
CC disease, multiple sclerosis, allergy, asthma and diabetic mellitus),  
CC diseases or disorders of the immune system, hypersensitivity,  
CC anaphylaxis, and blood group incompatibility. The present nucleic acid  
CC represents an intestinal epithelium/peyer's patch M cell-associated DNA  
CC sequence of the invention. NOTE: The present sequence is not shown in the  
CC specification, but has been retrieved from the WIPO website.

XX Primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs.

XX Claim 8; SEQ ID NO 12388; 2537pp + Sequence Listing; English.

XX The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises:  
XX (a) an oligo-dT primer and an oligonucleotide complementary to the  
XX complementary strand of a polynucleotide which comprises one of the 5602  
XX nucleotide sequences defined in the specification, where the  
XX oligonucleotide comprises at least 15 nucleotides; or (b) a combination  
XX of an oligonucleotide comprising a sequence complementary to the  
XX complementary strand of a polynucleotide which comprises a 5'-end  
XX sequence and an oligonucleotide comprising a sequence complementary to a  
XX polynucleotide which comprises a 3'-end sequence, where the  
XX oligonucleotide comprises at least 15 nucleotides and the combination of  
XX the 5'-end sequence/3'-end sequence is selected from those defined in the  
XX specification. The primer sets can be used in antisense therapy and in  
XX gene therapy. The primers are useful for synthesising polynucleotides,  
XX particularly full-length cDNAs. The primers are also useful for the  
XX detection and/or diagnosis of the abnormality of the proteins encoded by  
XX the full-length cDNAs. The primers allow obtaining of the full-length  
XX cDNAs easily without any specialised methods. AAH03166 to AAH13628 and  
XX AAH13633 to AAH18742 represent human cDNA sequences; AAH92446 to AAH95893  
XX represent human amino acid sequences; and AAH13629 to AAH13632 represent  
XX oligonucleotides, all of which are used in the exemplification of the  
XX present invention

XX PT New isolated antigenic peptides e.g., for G protein-coupled receptors  
XX (GPCR), useful for diagnosing and designing drugs for treating conditions  
XX in which GPCRs are involved, e.g. AIDS, Alzheimer's disease, cancer or  
XX autoimmune diseases.  
XX  
XX PS Disclosure; Fig 1; 523pp; English.  
XX  
XX CC The present invention describes antigenic peptides (I) comprising: (a)  
XX any one of 1601 sequences (see ABP82019 to ABP83619) of 12-24 amino  
XX acids. Also described: (1) an assay for the detection of a particular G  
XX protein-coupled receptor (GPCR) or a candidate polypeptide in a sample;  
XX and (2) an isolated antibody having high specificity and high affinity or  
XX avidity for a particular GPCR. (I) can be used as GPCR modulators and in  
XX gene therapy. The antigenic peptides for GPCRs are useful in detecting an  
XX antibody against a particular GPCR, and in the production of specific  
XX antibodies. The peptides and antibodies are also useful for detecting the  
XX presence or absence of corresponding GPCRs. The antigenic peptides for  
XX GPCRs and antibodies are useful for diagnosing and designing drugs for  
XX treating immune-related diseases, growth-related diseases, cell  
XX regeneration-related disease, immunological-related cell proliferative  
XX diseases, or autoimmune diseases, e.g. AIDS, Alzheimer's disease,  
XX atherosclerosis, bacterial, fungal, protozoan or viral infections,  
XX osteoarthritis, osteoporosis, cancer, cardiomyopathy, chronic and acute  
XX inflammation, allergies, Crohn's disease, diabetes, graft versus host

XX  
XX CC The present invention describes an isolated nucleic acid molecule, which  
XX comprises the sequence of any of the genes that are up-regulated or down-  
XX regulated in specific cancers (e.g. about 1031 genes up-regulated in  
XX acute lymphocytic leukemia). ACC72641 to ACC72860 represent cancer  
XX related gene nucleotide sequences which encode the proteins given in  
XX ABR58521 to ABR58709. Also described: (1) determining the presence or  
XX absence of a pathological cell in a patient; (2) an expression vector  
XX comprising a nucleic acid molecule described above; (3) a host cell  
XX comprising the vector; (4) an isolated polypeptide, which is encoded by  
XX the nucleic acid; (5) an antibody that specifically binds the polypeptide  
XX of (4); (6) specifically targeting a compound to a pathological cell in a  
XX patient by administering to the patient the antibody above; and (7) a  
XX drug screening assay. The nucleic acid is useful as diagnostic markers or  
XX therapeutic targets. In particular, the nucleic acid is useful for  
XX diagnosing a pathology, e.g. cancer (e.g. cancer of the bone marrow,  
XX bladder, brain, breast, cervix, colon/rectum, kidney, lung, ovary,  
XX pancreas, prostate, skin and uterus), wounds, ischaemia, heart diseases,  
XX atherosclerosis and endometriosis. The nucleic acid is also useful in  
XX drug screening, particularly for identifying agents for treating these  
XX pathologies

 CC The invention relates to nucleic acids and proteins (ADN38683-ADN40064)  
 CC whose expression is upregulated or downregulated in specific cancers or  
 CC other diseases such as angiogenic or fibrotic disorders, and to methods

CC of determining the presence or absence of a pathological cell in a  
 CC patient by detecting a nucleic acid at least 80% identical to those of  
 CC the invention or by detecting a polypeptide of the invention. The  
 CC invention also relates to expression vectors and host cells comprising a  
 CC nucleic acid of the invention; antibodies which specifically bind a  
 CC polypeptide of the invention; use of such antibodies for drug targeting;  
 CC and methods of screening for modulators of activity or expression of the  
 CC polypeptides and nucleic acids. The nucleic acids, polypeptides,  
 CC antibodies and methods are useful for diagnosing, prognosing and treating  
 CC cancer and other conditions such as psoriasis, ischaemia, heart disease,  
 CC atherosclerosis, inflammatory diseases, autoimmune diseases, retinal  
 CC neovascularisation syndromes, scarring and uterine fibroids. They may  
 CC also be useful in wound healing and in contraception. The present  
 CC sequence represents a nucleic acid sequence of the invention.

XX PT New nucleic acid molecule encoding a human G-protein coupled receptor,
XX PT RAI3, useful for preventing, treating or ameliorating chronic obstructive
XX PT pulmonary disease (COPD), COPD-like disorder, or the underlying symptoms
XX PT of COPD.
XX PS
XX PS Claim 21; SEQ ID NO 18; 301pp; English.
XX XX
XX CC The present sequence is that of cDNA encoding a human G-protein coupled
XX CC receptor (Class C, Group 5), denoted retinoic acid induced 3 (RAI-3).
XX CC Proteomics methods were used to isolate cigarette smoke-inducible
XX CC tyrosine phosphorylated proteins from airway epithelial cells. RAI-3 was
XX CC identified as being tyrosine phosphorylated and/or as being
XX CC associated/complexed with tyrosine phosphorylated proteins only in those
XX CC cells that had been exposed to cigarette smoke. Since RAI-3 is primarily
XX CC expressed in lung tissue, and since cigarette smoke is a major causative
XX CC factor of chronic obstructive pulmonary disease (COPD), RAI-3 provides a
XX CC novel cellular target for identifying modulators, e.g. agonists or
XX CC antagonists, useful for the treatment and/or prevention of COPD and
XX CC related disorders such as emphysema and chronic bronchitis. RAI-3
XX CC modulators, e.g. agonists and antagonists, especially antisen-
XX CC compounds, can be used to treat COPD and other disorders and diseases
XX CC associated with regulation of NF-kB and/or its associated or interacting
XX CC signaling molecules. Single nucleotide polymorphisms (SNPs) detected in
XX CC the RAI-3 gene are useful for determining COPD association in
XX CC individuals. RAI-3 nucleic acid molecules and polypeptides are useful for
XX CC preventing, treating or ameliorating disorders related to aberrant GPCR
XX CC signaling or cell cycle regulation, pulmonary disorders, inflammatory
XX CC lung disorders, COPD, the underlying symptoms of COPD, COPD-related
XX CC disorders or conditions, autoimmune disorders, disorders related to
XX CC hyperimmune activity, inflammatory conditions, disorders related to
XX CC aberrant acute phase responses, hypercongenital conditions, birth
XX CC defects, necrotic lesions, wounds, organ transplant rejection, renal
XX CC diseases, ischaemia-reperfusion injury, heart disorders, disorders
XX CC related to aberrant signal transduction, proliferation disorders,
XX CC cancers, HIV infection, asthma, cystic fibrosis, pulmonary fibrosis,
XX CC ulcerative colitis, cerebral infarct, myocardial infarct, diabetic
XX CC nephropathy, allergic rhinitis, Crohn's disease, atherosclerosis,
XX CC rheumatoid arthritis, inflammatory/autoimmune disorders, glioblastoma,
XX CC pulmonary small cell undifferentiated carcinoma, carcinoma of the breast,
XX CC colon, lung, ovary, pancreas, prostate, non-Hodgkin's lymphoma, disorders

XX  
XX New nucleic acid molecule encoding a human G-protein coupled receptor,  
FT RAI3, useful for preventing, treating or ameliorating chronic obstructive  
FT pulmonary disease (COPD), COPD-like disorder, or the underlying symptoms  
FT of COPD.  
XX  
XX Claim 1; SEQ ID NO 2; 301pp; English.  
XX  
XX The present sequence is that of cDNA encoding a human G-protein coupled  
CC receptor (Class C, Group 5), denoted retinoic acid induced 3 (RAI-3).  
CC Proteomic methods were used to isolate cigarette smoke-inducible  
CC tyrosine phosphorylated proteins from airway epithelial cells. RAI-3 was  
CC identified as being tyrosine phosphorylated and/or as being  
CC associated/complexed with tyrosine phosphorylated proteins only in those  
CC cells that had been exposed to cigarette smoke. Since RAI-3 is primarily  
CC expressed in lung tissue, and since cigarette smoke is a major causative  
CC factor of chronic obstructive pulmonary disease (COPD), RAI-3 provides a  
CC novel cellular target for identifying modulators, e.g. agonists or  
CC antagonists, useful for the treatment and/or prevention of COPD and  
CC related disorders such as emphysema and chronic bronchitis. RAI-3  
CC modulators, e.g. agonists and antagonists, especially antisense  
CC compounds, can be used to treat COPD and other disorders and diseases  
CC associated with regulation of NF-kB and/or its associated or interacting  
CC signaling molecules. Single nucleotide polymorphisms (SNPs) detected in  
CC the RAI-3 gene are useful for determining COPD association in  
CC individuals. RAI-3 nucleic acid molecules and polypeptides are useful for  
CC preventing, treating or ameliorating disorders related to aberrant GPCR  
CC signaling or cell cycle regulation, pulmonary disorders, inflammatory  
CC lung disorders, COPD, the underlying symptoms of COPD, COPD-related  
CC disorders or conditions, autoimmune disorders, disorders related to  
CC hyperimmune activity, inflammatory conditions, disorders related to  
CC aberrant acute phase responses, hypercongenital conditions, birth  
CC defects, necrotic lesions, wounds, organ transplant rejection, renal  
CC diseases, ischemia-reperfusion injury, heart disorders, disorders  
CC related to aberrant signal transduction, proliferation disorders,  
CC cancers, HIV infection, asthma, cystic fibrosis, pulmonary fibrosis,  
CC ulcerative colitis, cerebral infarct, myocardial infarct, diabetic  
CC nephropathy, allergic rhinitis, Crohn's disease, atherosclerosis,  
CC rheumatoid arthritis, inflammatory/autoimmune disorders, glioblastoma,  
CC pulmonary small cell undifferentiated carcinoma, carcinoma of the breast,  
CC colon, lung, ovary, pancreas, prostate, non-Hodgkin's lymphoma, disorders  
CC associated with aberrant cell adhesion, I-CAM function and/or regulation,  
CC E-selectin function and/or regulation, or aberrant NF-kB function and/or  
CC regulation (all claimed).

XX  
XX Detecting pancreatic cancer-associated transcript in a biological sample,  
FT useful for diagnosing or treating the disease, comprises contacting the  
FT sample with a polynucleotide that selectively hybridizes to a specific  
FT sequence.  
XX  
XX Claim 7; SEQ ID NO 9; 263pp; English.  
XX  
XX The present invention describes a method for detecting a pancreatic  
CC cancer-associated transcript in a biological sample. The method comprises  
CC contacting the biological sample with a polynucleotide that selectively  
CC hybridizes to a sequence at least 80% identical to a sequence as shown in  
CC any one of Tables 3 to 25 in the specification or having the GenBank  
CC Accession Number AF279145. Also described: (1) diagnosing pancreatic  
CC cancer in a human or animal subject being tested, determining the  
CC likelihood that a subject having a pancreatic cancer will survive, or  
CC determining the suitability of a subject having a pancreatic cancer for  
CC surgical resection therapy; (2) detecting a pancreatic cancer-associated  
CC polypeptide in a biological sample; (3) determining the likelihood that a  
CC subject having a pancreatic cancer will survive; and (4) monitoring the  
CC efficacy of a therapeutic treatment of pancreatic cancer. A pancreatic  
CC cancer-associated transcript has cytostatic activity, and can be used in  
CC gene and protein therapy. A pancreatic cancer-associated transcript  
CC polynucleotide, a vector comprising the polynucleotide, an isolated  
CC polypeptide or an antibody that binds to the isolated polypeptide can be  
CC used for diagnosing or prognosing pancreatic cancer or for preparing a  
CC medicament for the treatment of pancreatic cancer. The prognostic or  
CC diagnostic methods are useful for the early detection of pancreatic  
CC cancer or its metastases, and for monitoring the progress of disease  
CC as during remission or following surgery or chemotherapy. The present  
CC sequence encodes human retinoic acid induced 3 (RAI3), which is used in  
CC the exemplification of the present invention.

New tumor-association

proliferative disorder, e

XX The invention relates to human tumour-associated antigenic target (TAT)  
CC polypeptides, and their related nucleic acids. The TAT polypeptides are  
CC overexpressed in cancer tissues compared to normal tissues, and may thus  
CC serve as effective targets for the diagnosis and treatment of cancer in  
CC mammals. The invention also relates to nucleic acid and polypeptide  
CC sequences at least 80% identical to the TAT nucleic acids and  
CC polypeptides; expression vectors and host cells comprising a TAT nucleic  
CC acid; an antibody specific for a TAT polypeptide; a peptide or organic  
CC molecule which binds to a TAT polypeptide; fusion proteins comprising a  
CC TAT polypeptide; and methods and compositions for the treatment or  
CC diagnosis of cancer in mammals. TAT polypeptides, nucleic acids,  
CC antibodies, antagonists, binding molecules and compositions are useful  
CC for diagnosing or treating a cell proliferative disorder associated with  
CC increased TAT expression, particularly cancers such as breast cancer,  
CC colorectal cancer, lung cancer, ovarian cancer, liver cancer, bladder  
CC cancer, pancreatic cancer, cervical cancer, cancers of the central  
CC nervous system, melanoma and leukaemia. TAT nucleic acids may further be  
CC used as hybridisation probes, in chromosome and gene mapping, in  
CC chromosome identification and in gene therapy. The present sequence  
CC represents a TAT nucleic acid of the invention

PT cancer, comprises detecting and blocking the over expression of a gene of a protein found in breast, lung, colon, or kidney tissue.

XX  
PS  
Claim 2: SEQ ID NO 2: 220pp: English.

The present invention describes a method for diagnosing and treating a cancer, e.g. breast, lung, colon, or kidney cancer. The method comprises detecting and blocking the over expression of a gene of a protein found in breast, lung, colon, or kidney tissue. Also described is an antibody or binding portion of an antibody that specifically binds a protein found in breast tissue, lung tissue, colon tissue, or kidney tissue. The antibody has cytostatic activity, and can be used in gene therapy. The methods, antibodies, polynucleotides and polypeptides from the present invention are useful for detecting, diagnosing, preventing and treating cancer, e.g. breast, lung, colon, or kidney cancer. The present sequence represents a nucleotide sequence given in the present invention, which is over expressed in human breast tumour tissue. N.B. All 385 sequences referenced in this patent are detailed in the US provisional application SN 60/447,900, filed 02/13/2003. In this application only one sequence, representing the longest sequence of each of the 65 clones is listed in Appendix A (and given as SEQ ID NO:1 to 65 in the Sequence Listing).

XX PT New nucleic acid, and derived proteins, useful for diagnosis of bronchial
XX cancer and in screening for therapeutic and diagnostic agents.
XX PS Claim 1; SEQ ID NO 350; 1381bp; German.
XX CC This invention relates to a novel isolated nucleic acid associated with
XX bronchial cancer comprising 489 defined sequences given in the
XX specification. The invention may be useful for the production of
XX compounds with a cytostatic activity through the inhibition of expression
XX or activity of tumour-associated proteins. The novel DNA sequences and
XX the proteins/peptides encoded by them are used for detecting bronchial
XX cancer or determining the risk of developing it and to screen for
XX specific binding partners of the DNA or protein sequences, where the
XX binding partners are potentially useful as agents for treating or
XX diagnosing bronchial cancer. The DNA or protein sequences can also be
XX used for prognosis, detection of metastases and for secondary treatment
XX (of tumours that have been stabilised or are no longer detectable).
XX Detecting abnormal expression of the DNA sequences provides early
XX diagnosis of bronchial cancers. The present sequence is that of a novel
XX bronchial cancer-associated human gene sequence of the invention.

XX PT Novel isolated antibody capable of binding to tumor-associated antigenic
XX target polypeptide, useful for treating cell proliferative disorder e.g.
XX cancer.
XX PS Claim 1; SEQ ID NO 40; 337pp; English.
XX CC The invention relates to a novel isolated antibody binding to a
XX polypeptide having at least 80% sequence identity to a polypeptide having
XX any one of 76 fully defined 182-910 amino acid tumor-associated antigenic
XX target polypeptide (TAT) sequences (AEA00127-AEA00202) given in the
XX specification, a polypeptide having any one of (AEA00127-AEA00202),
XX lacking its associated signal peptide, or an extracellular domain of a
XX polypeptide having any one of (AEA00127-AEA00202). The polypeptide is
XX encoded by the nucleotide sequence having any one of (AEA00049-AEA00126).
XX An antibody of the invention has cytostatic activity. The antibody is
XX useful for inhibiting growth of a cell expressing TAT188, which involves
XX contacting the cell with the antibody. The cell is a cancer cell chosen
XX from breast, colon, rectum, endometrium, kidney, lung, ovary, skin and
XX liver cell. The cancer cell is a mammalian cell, preferably a human cell.
XX The antibody is also useful for detecting the level of TAT188
XX polypeptide expressed in a test cell relative to a control cell, and for
XX detecting the level of TAT188 polypeptide or a polypeptide having at
XX least 80 % sequence identity to the TAT188 polypeptide sequence in a test
XX cell relative to a control cell. The antibody is useful for treating a
XX preventing a cell proliferative disorder associated with increased
XX expression or activity of a polypeptide having at least 80 % identity to
XX a TAT188 polypeptide sequence. The cell proliferative disorder is cancer.
XX The method of the invention is useful for inhibiting the growth of a
XX cancer cell. The present sequence encodes a polypeptide of the invention.

PT  Novel isolated antibody e.g. anti-E16 or anti-TAT112 antibody that binds
PT  to tumor-associated antigenic target polypeptide, useful for diagnosing
PT  or treating cancer.
XX
PS  Claim 1; SEQ ID NO 40; 96pp; English.
XX
CC  This invention relates to a novel isolated antibody, for example anti-E16
CC  or anti-TAT112 antibody, that binds to a tumor-associated antigenic
CC  target polypeptide (TAT) and that lacks an associated signal peptide
CC  sequence. The invention may be useful for the development of compounds
CC  with a cytostatic activity acting as antagonists of the TAT188
CC  polypeptide or RNA interference whilst the disclosed sequences may be
CC  useful for gene therapy. The invention is useful for inducing the death
CC  of a cell (such as a cancer cell chosen from breast, colon, rectum,
CC  endometrium, kidney, lung, ovary, skin and liver) to which it binds,
CC  inhibiting proliferation or promoting cell death of a cell expressing
CC  TAT188. In addition, the invention may be useful for detecting the level
CC  of TAT188 polypeptide in a test cell relative to a control cell, or
CC  treating or preventing a cell proliferative disorder associated with
CC  increased expression of TAT188. The novel antibody of the invention is
CC  useful for inhibiting the growth of a cancer cell and may be useful for
CC  diagnosing or treating cancer. The present sequence is that of the human
CC  TAT115 cDNA which encodes a protein against which an antibody of the
CC  invention may be targeted.

 CC The invention relates to 2175 novel human ovarian antigens (ABP41054-  
 CC ABP43228) and to cDNAs encoding them (ABQ54131-ABQ56305), and also  
 CC encompasses polypeptides 90% identical and polynucleotides 95% identical

CC to the sequences of the invention. The invention additionally relates to  
 CC recombinant vectors and host cells comprising human ovarian antigen  
 CC polynucleotides, antibodies against human ovarian antigens, and the use  
 CC of ovarian antigen polynucleotides and polypeptides in diagnosing,  
 CC treating, prognosing or preventing various ovary and/or breast-related  
 CC disorders. Such conditions include ovarian cancer and breast cancer, and  
 CC metastatic tumours of ovarian or breast origin, reproductive system  
 CC disorders (e.g., infertility, disorders of pregnancy, anovulation,  
 CC polycystic ovary syndrome, ovarian cysts, and dysmenorrhoea), endocrine  
 CC disorders, infections (e.g., chlamydia, HIV, toxoplasmosis, and toxic  
 CC shock syndrome), inflammatory conditions (e.g., mastitis, oophoritis and  
 CC vaginitis), immune disorders (e.g., congenital and acquired  
 CC immunodeficiencies, autoimmune oophoritis, systemic lupus erythematosus),  
 CC blood-related disorders (e.g., anaemia), cardiovascular disorders,  
 CC respiratory disorders, neurological disorders, gastrointestinal disorders  
 CC and urinary system disorders. Ovarian antigen polypeptides and  
 CC polynucleotides may also be used in screening for compounds which  
 CC modulate ovarian antigen expression or activity. The polynucleotides may  
 CC further be used for gene therapy, chromosome mapping, in the  
 CC identification of individuals and in forensic analysis, and the  
 CC polypeptides may be used as food additives or to prepare antibodies  
 CC useful in disease diagnosis, drug targeting and phenotyping. The present  
 CC sequence represents cDNA encoding a human ovarian antigen of the  
 CC invention. Note: The sequence data for this patent did not form part of  
 CC the printed specification, but was obtained in electronic format directly  
 CC from WIPO at ftp.wipo.int/pub/published\_pct\_sequences

XX PT New nucleic acid differentially expressed in pancreatic tumor tissue, for
XX PT use as diagnostic agents and in screening for therapeutic agents.
XX PS Claim 1; SEQ ID NO 42; 28pp; German.
XX CC The invention relates to a novel human nucleic acid sequence of the
XX CC pancreas and its encoded protein. The invention further comprises:
XX CC proteins and peptides, preferably isolated, that contain a sequence
XX CC encoded by the novel nucleic acid; and methods for diagnosis and
XX CC treatment of pancreatic cancer, using a substance that inhibits or binds
XX CC to the protein or its DNA, including: an antisense oligonucleotide, short
XX CC interfering RNA or ribozyme directed against the pancreatic protein, an
XX CC organic molecule, particularly having a molecular weight below 5000,
XX CC especially 300, that binds to the pancreatic DNA, an aptamer or
XX CC (monoclonal) antibody, preferably human or humanized, that binds to the
XX CC pancreatic DNA, or an anti-idiotypic antibody raised against the
XX CC monoclonal antibody, any of which may be derivatized with a reporter
XX CC group, cytotoxic compound, immunostimulant and/or radioisotope. The novel
XX CC human pancreatic proteins and their encoding DNA have cytostatic
XX CC activity. The novel sequences are useful for inhibiting transcription
XX CC and/or expression of genes and proteins associated with pancreatic
XX CC cancer. This polynucleotide sequence represents the DNA encoding one of
XX CC the novel human pancreatic proteins of the invention. Note: This sequence
XX CC is not shown in the specification, it has been electronically downloaded
XX CC from a DVD-rom provided with this specification by the European Patent
XX CC Office.

XX Identifying reporter and target genes for particular biological pathway  
PT of interest, useful for drug designing, involves identifying a gene which  
PT clusters to geneset associated with biological pathway.  
XX  
PS Claim 45; Fig 8; 239pp; English.  
XX  
CC The present sequence represents a reporter gene from the ergosterol  
CC pathway. The specification also describes reporter genes from the protein  
CC kinase C pathway, and the invasive growth pathway. The genes are  
CC identified using methods of the invention. The specification describes  
CC methods for identifying a reporter gene or a target gene for a particular  
CC biological pathway in a cell. The methods comprise identifying a gene  
CC which clusters to a geneset associated with the pathway. The gene  
CC identified is necessary for normal function of the pathway. The methods  
CC are useful for analysing the activity of biological pathways and in drug  
CC designing, drug therapies, or other biological agents e.g. insecticides,  
CC herbicides, fungicides, antibodies or antivirals. The reporter gene is  
CC useful as a specific target for drugs which are designed to enhance,  
CC inhibit or modulate a particular biological pathway

XX  
PS Example 4; SEQ ID NO 196; 594pp; Japanese.  
XX  
CC This invention relates to a novel method of identifying ligands to an  
CC orphan receptor protein which comprises transforming cells with DNA  
CC encoding a fusion protein of the orphan receptor with a fluorescent  
CC protein, so that the fusion protein is expressed in the cells (or cell  
CC membranes isolated from them) and contacting the cells with the potential  
CC ligand to be tested. A suitable fluorescent protein for incorporation in  
CC the fusion protein is green fluorescent protein (GFP), for example GFP-1,  
CC wild-type GFP, GFPuv or Enhanced GFP (EGFP). The method is useful for the  
CC identification of ligands binding to an orphan receptor protein.

XX PT Nucleic acid array for detecting cancer-associated (CA) nucleic acid,
XX consists of nucleic acid probes having specific contiguous nucleotides of
XX CA polynucleotide.
XX
XX PS Disclosure; SEQ ID NO 52; 264pp; English.
XX
XX CC The invention relates to a novel nucleic acid array (I) for detecting a
XX cancer-associated (CA) nucleic acid, consisting of 2 or more nucleic acid
XX probes each comprising 10 or more contiguous nucleotides of 2 or more CA
XX polynucleotide sequences, or its complement. The invention has cytostatic
XX activity. The nucleic acid array is useful for detecting a CA nucleic
XX acid. An antibody of the invention is useful for detecting the presence
XX or absence of cancer cells. A method of the invention is useful for
XX inhibiting expression of a CA gene in a cell, or for treating cancer. The
XX CA polynucleotide or polypeptide as mentioned in (I) or (II) is useful as
XX vaccine for treating cancer e.g. lymphoma or leukemia. The present
XX sequence represents a human genomic sequence encoding a CA polypeptide
XX (CAP) of the invention.

XX PT Producing a tobacco plant having decreased expression of a nicotine
XX demethylase gene comprises crossing a first tobacco plant with a second
XX tobacco plant and germinating the collected seed of an F1 progeny plant.
XX
XX PS Claim 32; SEQ ID NO 1152; 641pp; English.
XX
XX CC The invention relates to a breeding method for producing a tobacco plant
XX with reduced expression of a nicotine demethylase gene comprises crossing
XX a first tobacco plant with variant nicotine demethylase gene expression
XX with a second tobacco plant with at least one phenotypic trait to produce
XX an F1 progeny plant, the seed of which is collected and germinated to
XX produce a tobacco plant having reduced expression of a nicotine
XX demethylase gene. Also included are breeding a nicotine demethylase
XX deficiency trait into a tobacco plant, producing a tobacco seed,
XX developing a tobacco plant in a tobacco breeding program, a tissue
XX culture of regenerable tobacco cells obtained from the tobacco plant of
XX the invention, producing a tobacco product, a breeding method for
XX producing a tobacco plant having a modified attribute, a method of
XX breeding an attribute into a tobacco plant, a tobacco plant or its
XX components produced by the method of breeding a nicotine demethylase
XX deficiency trait into a tobacco plant, producing a tobacco seed, producing
XX a tobacco plant having a modified attribute or developing a tobacco plant
XX in a tobacco breeding program, an isolated genetic marker comprising a
XX nucleic acid sequence that is substantially identical to a nucleic acid
XX sequence given in the specification (the nucleic acids comprise isolated
XX cytochrome p450 cDNAs), an expression vector comprising the isolated nucleic acid
XX sequence, a plant or plant component comprising the isolated nucleic acid
XX sequence, a plant produced from a germinated seed of the plant, reducing
XX the expression or enzymatic activity of a constitutive, or an ethylene
XX induced or senescence induced tobacco polypeptide in a plant cell, and
XX increasing the expression or enzymatic activity of a constitutive, or an
XX ethylene or senescence induced tobacco polypeptide in a plant cell. The
XX phenotypic trait comprises disease resistance, high yield, high grade
XX index, curability, curing quality, mechanical harvestability, holding
XX ability, leaf quality, height, maturation, stalk size, or leaf number per
XX plant. The breeding method for producing a tobacco plant having decreased
XX expression of a nicotine demethylase gene is useful developing desirable
XX (non-genetically engineered) germplasm. The plant is useful in producing
XX (smokeless) tobacco products. The tobacco product is a moist or dry
XX snuff, a chewing tobacco, a cigarette product, a cigar product, a
XX cigarillo, a pipe tobacco, or bidis. The p450 cDNAs were isolated using
XX degenerate PCR primers designed against cytochrome p450 motifs. The
XX present sequence is a cytochrome p450 cDNA of the invention.

XX New breeding method, useful for producing a tobacco plant having  
PT decreased expression of a nicotine demethylase gene comprising crossing  
PT germinating F1 progeny seed to produce the tobacco plant.  
XX  
XX Claim 63; SEQ ID NO 1152; 511pp; English.  
XX  
XX The invention relates to a breeding method for producing a tobacco plant  
XX having decreased expression of a nicotine demethylase gene. The method  
XX involves crossing a first tobacco plant having variant nicotine  
XX demethylase gene expression with a second tobacco plant containing at  
XX least one phenotypic trait (e.g., disease resistance, high yield etc.) to  
XX produce an F1 progeny plant; collecting the seed of the F1 progeny; and  
XX germinating the seed to produce a tobacco plant having decreased nicotine  
XX demethylase expression. The invention also relates to a tobacco plant or  
XX its components produced using the method of the invention; a tissue  
XX culture of regenerable tobacco cells obtained from such plants; a tobacco  
XX product produced from such plants; and a method of breeding a tobacco  
XX plant with a modified attribute comprising variant expression of a  
XX cytochrome P450 polynucleotide (including the nicotine demethylase gene).  
XX The invention further relates to isolated constitutive, ethylene-induced  
XX or senescence-induced genetic markers comprising tobacco cytochrome P450  
XX nucleic acid molecules, including nicotine demethylase sequences; methods  
XX for reducing or increasing the expression or activity of polypeptides  
XX encoded by these nucleic acid molecules; expression vectors, plants or  
XX plant components comprising one of these polynucleotides; and tobacco  
XX products produced from such plants. The methods of the invention are  
XX useful for the breeding (especially marker assisted breeding) of tobacco  
XX plants with decreased nicotine demethylase expression or with altered

cytochrome P450 expression or activity. Altered expression of such enzymes can result in a change in the composition of secondary metabolites such as alkaloids (e.g., nicotine), phenylpropanoids, terpenoids, lipids, cyanogenic glycosides and glucosinolates, with effects on the flavor or aroma of plant products. They may also affect herbicide tolerance, resistance to disease or insects, quality factors related to undesirable constituents, structural traits, fiber content, leaf yield, ripening, leaf curing or storage properties. Tobacco plants of the invention in which the expression of cytochrome P450 genes is altered may have desirable traits such as altered levels of nicotine or N'-nitrosonicotine. Such plants can be used in the production of tobacco products such as moist or dry snuff, chewing tobacco, cigarettes, cigars, cigarillos, pipe tobacco, bidis or smokeless tobacco products. The present sequence represents a specifically claimed tobacco cytochrome P450 polynucleotide useful in marker assisted breeding methods. Note: The sequence data for this patent is also available in electronic format directly from the US patent office at [seqdata.uspto.gov/sequence.html?DocID=20060041949](http://seqdata.uspto.gov/sequence.html?DocID=20060041949).

XX Method for determining open reading frames of the genome of an organism  
PT using primers at low stringency conditions, useful in the construction of  
PT contigs or constructs of sequenced nucleic acid molecules.  
XX  
XX Example 7; Page 111; 113pp; English.  
XX  
XX The present sequence is a cDNA sequence obtained using a method for  
XX determining open reading frames (ORFs) of the genome of an organism. An  
XX aliquot of cDNA from human breast cancer cells was mixed with a single,  
XX arbitrary primer, Moloney murine leukaemia virus reverse transcriptase,  
XX reverse transcriptase buffer and dNTPs. The mixture was incubated under  
XX low stringency conditions to yield single stranded cDNA. The same primer  
XX was then used to amplify the cDNA by PCR. Rather than providing  
XX nucleotide sequence information from the non-coding termini of nucleic

CC acid molecules, the method provides information on the more interesting  
 CC and relevant internal portions, such as ORFs. The method also permits the  
 CC construction of contigs of sequenced nucleic acid molecules

 XX Determining ORFs of the genome by contacting mRNA with a single  
 PT oligonucleotide primer, useful for population studies that identify genes  
 PT associated with diseases such as cardiovascular, autoimmune and  
 PT congenital diseases.  
 XX  
 PS Example 7; Page 160; 166pp; English.  
 XX  
 CC The invention relates to a novel method for determining open reading  
 CC frames (ORFs) of the genome of an organism comprising contacting  
 CC messenger RNA from a cell of the organism with a single, oligonucleotide  
 CC primer at low stringency. The method is an improved ORESTES sequencing  
 CC method. The methods of the present invention are useful for sequencing  
 CC of, essentially, the entire coding component of an organism,  
 CC identification of previously unknown nucleic acid molecules, assigning  
 CC previously identified nucleotide sequences to internal regions of genes  
 CC and population studies that identify genes associated with diseases such  
 CC as heart disease, bronchitis, Alzheimer's disease, autoimmune diseases  
 CC and congenital diseases. This polynucleotide represents a DNA sequence  
 CC that is used in the novel method of the invention

 XX  
 XX Determining open reading frames of genome of an organism e.g. a human  
 PT suffering from cancer involves use of single oligonucleotide primer at  
 PT low stringency for preparing single-stranded cDNA from mRNA of  
 PT individual.  
 XX  
 PS Example 7; Page 56; 959pp; English.  
 XX  
 CC The invention describes a method of determining open reading frames in  
 CC the genome of organism, comprising contacting mRNA from cell of organism  
 CC with a single oligonucleotide primer (I) at low stringency, preparing  
 CC single-stranded cDNA by reverse transcribing mRNA with (I), amplifying  
 CC cDNA, sequencing the product, and repeating the contacting, preparing  
 CC and amplifying steps with different primers and sequencing resulting  
 CC nucleic acids. The method is useful for: determining that a known  
 CC nucleotide sequence from a genome of an organism corresponds to a  
 CC nucleic acid molecule from a genome of an organism; and for sequencing  
 CC all or part of a genome of an organism. mRNA is obtained from mammalian  
 CC or human cell which is associated with a pathological condition e.g. a  
 CC colon cancer or breast cancer cell. The method is useful for analyses of  
 CC populations of subjects and can be used to carry out genetic analyses of  
 CC large or small populations. further, it can be used to study living  
 CC systems to determine if, e.g. there have been genetic shifts which render  
 CC an individual or population more or less likely to be afflicted with  
 CC diseases such as cancer, to determine antibiotic resistance or non-  
 CC tolerance, and so forth. The method can also be used in the study of  
 CC congenital diseases, and the risk of affliction to a fetus, as well as  
 CC the study of whether the conditions are likely to be passed to offspring  
 CC through ova or sperm. The analyses for pathological conditions can be  
 CC carried out in all animals, plants, birds, fish, etc. Using this method,  
 CC in the area of agriculture, for example the genomes of food crops can be  
 CC studied to determine if resistance genes are present, defects in plant  
 CC genomes can also be studied in this way. Similarly, the method permits  
 CC determination of the pathogens which integrate into the genome, such as  
 CC retroviruses and other integrating viruses such as influenza virus, have

CC undergone shifts or mutations, which may require different approaches to  
CC therapy. This method is also applied to eukaryotic pathogens, such as  
CC trypanosomes, different types of Plasmodium, etc. The method essentially  
CC eliminates sequencing of non-coding portions. This sequence represents a  
CC polynucleotide isolated from human colon cancer cell cDNA library

XX PT New nucleic acid that is a 5' expressed sequence tag (5' EST) for  
XX PT obtaining cDNAs and genomic DNAs that correspond to 5'ESTs and for  
XX PT diagnostic, forensic, gene therapy and chromosome mapping procedures.

XX PS Claim 1; SEQ ID NO 32761; 71pp + Sequence Listing; English.

XX CC The present sequence is one of a large number of 5' ESTs derived from  
XX CC mRNAs encoding secreted proteins. No ORF has yet been conclusively  
XX CC identified within the present sequence. The 5' ESTs were prepared from  
XX CC total human RNAs or polyA+ RNAs derived from 30 different tissues. EST  
XX CC sequences usually correspond mainly to the 3' untranslated region (UTR)  
XX CC of the mRNA because they are often obtained from oligo-dT primed cDNA  
XX CC libraries. Such ESTs are not well suited for isolating cDNA sequences  
XX CC derived from the 5' ends of mRNAs and even in those cases where longer  
XX CC cDNA sequences have been obtained, the full 5' UTR is rarely included. 5'  
XX CC ESTs are derived from mRNAs with intact 5' ends and can therefore be used  
XX CC to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in  
XX CC diagnostic, forensic, gene therapy and chromosome mapping procedures.  
XX CC They are used to obtain upstream regulatory sequences and to design  
XX CC expression and secretion vectors

XX
PT Polynucleotides encoding digestive system antigens, useful for
PT diagnosing, treating, preventing and/or prognosing disorders of the
PT digestive system, particularly cancer and cancer metastases.
XX
PS Claim 1; SEQ ID NO 784; 986pp; English.
XX
XX The present invention provides the protein and coding sequences of a
CC number of human digestive system antigens. These can be used in the
CC diagnosis, treatment and prevention of digestive system disorders,
CC including cancer, Meckel's diverticulum, bacterial or parasitic
CC infections, appendicitis, Hirschsprung's disease, chronic colitis or
CC ulcerative colitis. The present sequence is a cDNA encoding a digestive
CC system antigen of the invention

XX Nucleic acids originating in gene expressed in human neuroblastoma,
XX useful as probe or primer in diagnosing prognosis of human neuroblastoma,
XX malignancy and susceptibility indicator or tumor marker for anti-cancer
XX agents.
XX
XX Claim 1; Page 2803; 2979pp; Japanese.
XX
XX The invention relates to novel genes (AAI93926-AAI97963) expressed in
XX human neuroblastoma. The nucleic acids are applicable as a probe or
XX primer in diagnosing the prognosis of human neuroblastoma, malignancy and
XX susceptibility indicators or tumour markers for anti-cancer agents. The
XX gene information for diagnosing prognosis is related to factors similar
XX to that for N-myc and TrkA genes

Inhibiting growth of a neuronal cell for treating epilepsy, comprises  
contacting a cell with EFHC1 or its analog, or an EFHC1 agonist.

Example 11; SEQ ID NO 8; 131pp; English.

This invention describes a novel of inhibiting growth of a neuronal cell  
and comprises contacting the cell with EFHC1 or its analog, or an EFHC1  
agonist e.g. an R-type voltage-dependent Ca<sup>2+</sup> channel. The invention also  
describes: a) a method of potentiating an epilepsy therapy in a patient  
by administering EFHC1 or its analog, or EFHC1 agonist, and administering  
an anti-epileptic drug; b) a method of identifying agents that promote  
cell death in a mammalian cell; c) a method of identifying an agent that  
modulates activity of an EFHC1 polypeptide; d) a method of identifying a  
mammalian cell or mammalian cell culture engineered to overexpress EFHC1;  
e) a method of monitoring the efficacy of an epilepsy treatment by  
detecting levels of AEF99260 or AEF99261 where an increased level of the  
EFHC1 polypeptide or EFHC1 polynucleotide or gene copy number in the  
biological sample compared to the level or copy number in a biological  
sample from the patient before the treatment is indicative of efficacious  
treatment; f) a method of diagnosing epilepsy in a mammalian subject; g)  
a vector or host cell containing a nucleic acid encoding an EFHC1  
polypeptide; h) an antibody that specifically binds to an EFHC1  
polypeptide and i) a diagnostic kit comprising a solid support  
(nitrocellulose, latex or plastic material), a detection reagent (anti-  
immunoglobulin, protein G, protein A or lectin) and a reporter group is  
chosen from radioisotopes, fluorescent groups, luminescent groups,  
enzymes, biotin and dye particles. the anti-epileptic drug promotes  
apoptosis and is chosen from carbamazepine, ethosuximide, CBZ epoxide,  
clonazepam, oxcarbazepine, sodium valproate, acetazolamide, clobazam,  
gabapentin, levetiracetam, phenobarbital, phenytoin,  
piracetam, primidone, tiagabine, topiramate, zonisamide or vigabatrin.  
The methods of the invention are used to a) inhibit growth of a neuronal

CC cell; b) potentiate an epilepsy therapy in a patient; c) potentiate  
CC treatment for juvenile myoclonic epilepsy (JMC); d) monitor the efficacy  
CC of epilepsy treatment and e) enables improvement of epilepsy treatment  
CC without causing substantial toxicity. This sequence represents a splice  
CC variant of the human BFHCl gene used in the invention.

PS Claim 5; SEQ ID NO 88; 443pp; English.

XX

CC The invention relates to novel human nucleic acid-associated proteins and  
CC genes encoding them, sequences that have at least 90-99 % identity to the  
CC sequences; or biologically active or immunogenic fragments of these. The  
CC polypeptides and polynucleotides are useful in diagnosing, treating and  
CC preventing disorders associated with aberrant expression of NAAP, such as  
CC cell proliferative (e.g. cancer or atherosclerosis), neurological (e.g.  
CC stroke, Parkinson's disease or epilepsy), developmental (e.g. Cushing's

CC syndrome), autoimmune/inflammatory (e.g. AIDS or allergies), or  
CC infections. These may also be used as elements on a microarray which may  
CC monitor or measure protein-protein interactions, drug-target  
CC interactions, and gene expression profiles. The polynucleotide may also  
CC be used in chromosomal mapping and in various diagnostic assays. These  
CC are also useful in assessing the effects of exogenous compounds on the  
CC expression of nucleic acids and amino acid sequences of NAAP, in  
CC facilitating drug discovery process, and in investigating the  
CC pathogenesis of diseases or medical conditions. This sequence corresponds  
CC to the gene encoding one of the proteins of the inventions.

 XX  
 CC The invention comprises the amino acid and coding sequences of human  
 CC nucleic acid-associated proteins (NAAP). The DNA and protein sequences of  
 CC the invention are useful for diagnosing, treating, or preventing  
 CC disorders associated with aberrant expression of NAAP. Specifically, the  
 CC disorders include cell proliferative disorders (e.g. atherosclerosis,  
 CC hepatitis, psoriasis, and cancer), neurological disorders (e.g. epilepsy,  
 CC stroke, dementia, Parkinson's disease, and multiple sclerosis),  
 CC developmental disorders (e.g. anemia, Cushing's syndrome, and spina  
 CC bifida), autoimmune/inflammatory disorders (e.g. AIDS, allergy, contact  
 CC dermatitis, diabetes, glomerulonephritis, osteoporosis, osteoarthritis,  
 CC and rheumatoid arthritis), and infections (e.g. bacterial, viral, fungal,  
 CC and parasitic infections). The present DNA sequence encodes a human NAAP  
 CC of the invention.

XX DR New tumor-associated antigenic target polypeptides and nucleic acids,  
XX PT useful in preparing a medicament for treating or detecting a  
XX PT proliferative disorder, e.g. breast, lung, colorectal, ovarian or  
XX PT prostate cancer or tumor.  
XX PS Claim 1; SEQ ID NO 3645; 7273pp; English.  
XX CC The invention relates to human tumour-associated antigenic target (TAT)  
XX CC polypeptides, and their related nucleic acids. The TAT polypeptides are  
XX CC overexpressed in cancer tissues compared to normal tissues, and may thus  
XX CC serve as effective targets for the diagnosis and treatment of cancer in  
XX CC mammals. The invention also relates to nucleic acid and polypeptide  
XX CC sequences at least 80% identical to the TAT nucleic acids and  
XX CC polypeptides; expression vectors and host cells comprising a TAT nucleic  
XX CC acid; an antibody specific for a TAT polypeptide; a peptide or organic  
XX CC molecule which binds to a TAT polypeptide; fusion proteins comprising a  
XX CC TAT polypeptide; and methods and compositions for the treatment or  
XX CC diagnosis of cancer in mammals. TAT polypeptides, nucleic acids,  
XX CC antibodies, antagonists, binding molecules and compositions are useful  
XX CC for diagnosing or treating a cell proliferative disorder associated with  
XX CC increased TAT expression, particularly cancers such as breast cancer,  
XX CC colorectal cancer, lung cancer, ovarian cancer, liver cancer, bladder  
XX CC cancer, pancreatic cancer, cervical cancer, cancers of the central  
XX CC nervous system, melanoma and leukaemia. TAT nucleic acids may further be  
XX CC used as hybridisation probes, in chromosome and gene mapping, in  
XX CC chromosome identification and in gene therapy. The present sequence  
XX CC represents a TAT nucleic acid of the invention

PT	Identifying nucleic acid sequences as biomarker for disease, by
PT	identifying nucleic acid sequences comprising methylated CpG site and
PT	down-regulated in diseased cells and comparing its expression level with
PT	demethylated nucleic acid.
XX	
FS	Claim 11; SEQ ID NO 47; 27pp; English.
XX	
CC	The invention relates to a method (M1) for identifying one or more
CC	nucleic acid sequences useful as a biomarker for a disease to be
CC	detected. (M1) involves identifying nucleic acid sequences comprising
CC	methylated CpG site in promoter-first exon region and that are down-
CC	regulated in diseased cells, comparing expression level of nucleic acid
CC	sequences with that of demethylated nucleic acid sequences and
CC	identifying nucleic acid sequences exhibiting increase in expression
CC	after demethylation. Also described: (1) detecting (M2) the presence or
CC	stage of a disease in a subject, which involves determining the degree of
CC	methylation of one or more CpG sites on nucleic acid sequences in a
CC	biological sample obtained from the subject, and determining the presence
CC	of, predposition to, or stage of the disease in the subject based on
CC	the degree of methylation; (2) monitoring the onset, progression, or
CC	regression of a disease in a subject; (3) determining the efficacy of a
CC	test compound for inhibiting a disease in a subject; and (4) a kit (I)
CC	useful for diagnosis, prognosis, staging, monitoring, and therapeutic
CC	treatment of a disease. (M1) is useful for identifying one or more
CC	nucleic acid sequences useful as a biomarker for a disease to be
CC	detected, where the nucleic acid sequences are useful for detecting, the
CC	presence or stage of a disease such as cancer e.g. colorectal cancer in a
CC	subject. The present sequence represents a specifically claimed human
CC	genomic sequence for use in the method of the invention. Note - The
CC	sequence data for this patent is not represented in the printed
CC	specification but was obtained in electronic format from the USPTO web
CC	site.

 XX New recombinant cancer-associated genes, such as KCMU9, useful for  
 PT diagnosing or treating carcinoma, e.g. breast, colon, rectal, pancreatic,  
 PT cervical, or skin cancers, lymphomas, or leukemia.  
 XX  
 PS Claim 5; SEQ ID NO 78; 251pp; English.  
 XX  
 CC The invention comprises then amino acid and coding sequences of cancer-  
 CC associated (CA) genes isolated from Nanoarchaeum equitans. The invention  
 CC also comprises the Nanoarchaeum equitans genome. The DNA and protein  
 CC sequences of the invention are useful for diagnosing and treating cancer  
 CC (e.g. carcinoma, lymphoma, or leukaemia). The present DNA sequence  
 CC represents a Nanoarchaeum equitans CA gene of the invention.

 PT one or more nucleic acids and/or modifying level or activity of one or  
 PT more proteins.  
 XX  
 PS Claim 1; SEQ ID NO 929; 134pp; English.  
 XX  
 CC This invention relates to a novel method for altering one or more plant  
 CC characteristics. Specifically, it refers to identifying genes that are up  
 CC - or down-regulated in transgenic plants overexpressing the heterodimeric  
 CC E2Fa/Dpa transcription factor of Arabidopsis and using these sequences to  
 CC alter plant characteristics accordingly. The present invention describes  
 CC generating transgenic plants for the production of growth regulators,  
 CC enzymes, therapeutics, pharmaceuticals and animal feed products, where  
 CC the altered plant characteristics are selected from increased yield or  
 CC biomass, enhanced survival capacity, stress tolerance, plant architecture

or physiology, altered endoreduplication, biochemistry, signal  
 transduction, storage lipid mobilisation and/or altered photosynthesis,  
 each relative to the corresponding wild type plants. Accordingly, these  
 sequences can also be useful as positive or negative selectable markers  
 during transformation of cells or tissues. The identified genes play a  
 role in a variety of biological processes such as DNA replication, cell  
 wall biosynthesis, nitrogen and/or carbon metabolism or they function as  
 CC transcription factors. This polynucleotide sequence is thale cress cDNA  
 CC upregulated 1.3 fold or more in plants overexpressing the E2Fa/Dpa  
 CC transcription factor, given in an exemplification of the invention.

(HUMA-) HUMAN GENOME SCI INC.

Rosen CA, Barash SC, Ruben SM;

WPI; 2001-488783/53.

P-PSDB; AAU15945.

PT New nucleic acid molecules encoding 461 human secreted proteins for  
diagnosing, preventing, treating or ameliorating medical conditions and  
used as food additives or preservatives.

XX Claim 1; SEQ ID NO 111; 980pp; English.

XX The invention relates to isolated nucleic acid molecules and their  
CC encoded secreted proteins. The nucleic acids and proteins are used to  
CC prevent, treat or ameliorate a medical condition in e.g. humans, mice,  
CC rabbits, goats, horses, cats, dogs, chickens or sheep. They are also used  
CC in diagnosing a pathological condition or susceptibility to a  
CC pathological condition. Antibodies to the proteins can also be used in  
CC alleviating symptoms associated with the disorders and in diagnostic  
CC immunoassays e.g. radioimmunoassays or enzyme linked immunosorbant assays  
CC (ELISA). Disorders which are diagnosed or treated include autoimmune  
CC diseases e.g. rheumatoid arthritis, hyperproliferative disorders e.g.  
CC neoplasms of the breast or liver, cardiovascular disorders e.g. cardiac  
CC arrest, cerebrovascular disorders e.g. cerebral ischaemia, angiodenesis,  
CC nervous system disorders e.g. Alzheimer's disease, infections caused by  
CC bacteria, viruses and fungi and ocular disorders e.g. corneal infection,  
CC and many other disorders listed in the specification. The polypeptides  
CC can also be used to aid wound healing and epithelial cell proliferation,  
CC to prevent skin aging due to sunburn, to maintain organs before  
CC transplantation, for supporting cell culture of primary tissues, to  
CC regenerate tissues and in chemotaxis. The polypeptides can also be used

CC as a food additive or preservative to increase or decrease storage  
CC capabilities, fat content, lipid, protein, carbohydrate, vitamins,  
CC minerals, cofactors and other nutritional components. The present  
CC sequence encodes a novel secreted protein of the invention. Note: The  
CC sequence data for this patent did not form part of the printed

XX PT New ovarian specific nucleic acid, useful as a vaccine, in gene therapy,  
XX or for identifying, diagnosing, monitoring, staging, imaging and treating  
XX ovarian cancer and non-cancerous disease states of the ovary.

XX PS Example 1; Page 162-163; 220pp; English.

XX CC The invention relates to a novel isolated ovarian specific nucleic acid.  
XX CC A nucleic acid sequence of the invention has cytostatic activity. The  
XX CC ovarian specific nucleic acid or a polypeptide encoded by it is useful  
XX CC for identifying, diagnosing, monitoring, staging, imaging and treating  
XX CC ovarian cancer and non-cancerous disease states of the ovary. The ovarian  
XX CC specific nucleic acid molecule or polypeptide is also useful as a  
XX CC vaccine, in gene therapy, for producing transgenic animals and cells, or  
XX CC producing engineered ovarian tissue for treatment and research. The  
XX CC antibody that specifically binds to the polypeptide is useful for  
XX CC treating a patient with ovarian cancer, particularly for inducing an  
XX CC immune response against the ovarian cancer cell expressing the nucleic  
XX CC acid molecule or polypeptide. The sequences shown in ADB81628-ADB81688  
XX CC represent human ovarian specific genes (OSG's) of the invention.

XX Novel nucleic acids and polypeptides, useful for treating disorders such

PT as central nervous system injuries.

XX Claim 1; SEQ ID NO 4905; 10078pp; English.

XX The invention relates to human nucleic acids (AAI57798-AAI61369) and the

CC encoded polypeptides (AAM38642-AAM42213) with nootropic,

CC immunosuppressant and cytostatic activity. The polynucleotides are useful  
CC in gene therapy. A composition containing a polypeptide or polynucleotide  
CC of the invention may be used to treat diseases of the peripheral nervous  
CC system, such as peripheral nervous injuries, peripheral neuropathy and  
CC localised neuropathies and central nervous system diseases, such as  
CC Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic  
CC lateral sclerosis, and Shy-Drager Syndrome. Other uses include the  
CC utilisation of the activities such as: Immune system suppression,  
CC Actin/inhibin activity, chemotactic/chemokinetic activity, haemostatic  
CC and thrombolytic activity, cancer diagnosis and therapy, drug screening,  
CC assays for receptor activity, arthritis and inflammation, leukaemias and  
CC C.N.S disorders. Note: The sequence data for this patent did not form  
CC part of the printed specification

XX  
XX New polynucleotides derived from human prostate, useful for modulating  
PT immune response to prevent or treat cancer.  
PT  
XX  
XX Claim 1; SEQ ID NO 1465; 189pp; English.

XX This invention relates to novel isolated polynucleotides of human origin,  
CC particularly isolated from the human prostate. Specifically, it refers to  
CC the diagnostics and therapeutics comprising these novel human  
CC polynucleotides, and includes the derived probes, antisense  
CC oligonucleotides and antibodies thereof. The identification of these  
CC human prostate genes that can inhibit tumour growth is useful for  
CC understanding the progression and nature of complex diseases such as  
CC cancer, and hence they are important in the drug discovery process. The  
CC present invention describes these polynucleotides and encoded  
CC polypeptides as exhibiting cytostatic activity, and through gene therapy  
CC and/ or vaccines they can be used to modulate the immune response for the

CC prevention or treatment of cancers, particularly of the prostate, but  
CC also for breast, lung and colon cancer. This polynucleotide sequence is a  
CC human cDNA sequence useful for the treatment of cancer, used in an  
CC exemplification of the invention. NOTE: These sequences are not given in  
CC the specification but are provided on the WIPO website.

XX  
XX New isolated polynucleotide and encoded polypeptides, useful in  
PT diagnostics, forensics, gene mapping, identification of mutations  
PT responsible for genetic disorders or other traits and to assess  
PT biodiversity.  
XX  
XX Claim 1; SEQ ID NO 557; 103pp; English.

XX The invention relates to isolated polynucleotide (I) and polypeptide (II)  
CC sequences. (I) is useful as hybridisation probes, polymerase chain  
CC reaction (PCR) primers, oligomers, and for chromosome and gene mapping,  
CC and in recombinant production of (II). The polynucleotides are also used  
CC in diagnostics as expressed sequence tags for identifying expressed  
CC genes. (I) is useful in gene therapy techniques to restore normal  
CC activity of (II) or to treat disease states involving (II). (II) is  
CC useful for generating antibodies against it, detecting or quantitating a  
CC polypeptide in tissue, as molecular weight markers and as a food  
CC supplement. (II) and its binding partners are useful in medical imaging  
CC of sites expressing (II). (I) and (II) are useful for treating disorders  
CC involving aberrant protein expression or biological activity. The  
CC polypeptide and polynucleotide sequences have applications in  
CC diagnostics, forensics, gene mapping, identification of mutations  
CC responsible for genetic disorders or other traits to assess biodiversity  
CC and to produce other types of data and products dependent on DNA and  
CC amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic  
CC coding sequences of the invention. Note: The sequence data for this

CC patent did not appear in the printed specification, but was obtained in

XX CC The invention relates to nucleic acids and proteins (ADN38683-ADN40064)  
 CC whose expression is upregulated or downregulated in specific cancers or  
 CC other diseases such as angiogenic or fibrotic disorders, and to methods  
 CC of determining the presence or absence of a pathological cell in a  
 CC patient by detecting a nucleic acid at least 80% identical to those of  
 CC the invention or by detecting a polypeptide of the invention. The  
 CC invention also relates to expression vectors and host cells comprising a  
 CC nucleic acid of the invention; antibodies which specifically bind a  
 CC polypeptide of the invention; use of such antibodies for drug targeting;  
 CC and methods of screening for modulators of activity or expression of the  
 CC polypeptides and nucleic acids. The nucleic acids, polypeptides,  
 CC antibodies and methods are useful for diagnosing, prognosing and treating  
 CC cancer and other conditions such as psoriasis, ischaemia, heart disease,  
 CC atherosclerosis, inflammatory diseases, autoimmune diseases, retinal  
 CC neovascularisation syndromes, scarring and uterine fibroids. They may  
 CC also be useful in wound healing and in contraception. The present  
 CC sequence represents a nucleic acid sequence of the invention.

XX PT New regulatory nucleic acid, useful for preparing transgenic plants with  
 PT altered seed testa, provides specific expression of attached genes in  
 XX seed endothelium and albumen.

XX PS Disclosure; Page 80; 85pp; French.

XX CC The present sequence represents a plant regulatory polynucleotide, which  
 CC was used to construct plasmid pBan2. The present sequence is a fragment  
 CC of the sequence given in ACC43789, which comprises regulatory sequences  
 CC that allow expression of a polynucleotide specifically in the endothelium  
 CC and/or albumen of plant seeds. The regulatory polynucleotide, and derived  
 CC expression cassettes or vectors, are used to produce transgenic plants in  
 CC which development of seed testa is altered, especially for reducing the

CC size or number of seeds, particularly complete absence of mature, fertile  
CC seeds, or modulating contents of flavonoids, tannins and cellulose  
CC (especially to produce maize and rape seeds with less intense yellow  
CC colour, or to alter nutritional properties)

XX New rice promoter, useful for manipulating crop plants to alter or

XX improve phenotypic characteristics, e.g. produce large quantities of oil

XX or proteins, resistance to insecticides, virus or fungi, stress tolerance

XX or high nutritional value.

XX Claim 1; SEQ ID NO 2386; 230pp; English.

XX The invention relates to plant nucleotide sequences that direct seed-,

XX leaf- and/or stem-, panicle-, root- or pollen-specific or -preferential

XX or constitutive transcription of an operatively linked nucleic acid

XX segment. The invention also relates to a method for augmenting a plant

CC genome and a method of identifying a gene, where its expression is  
CC altered in the seed, leaf, stem, panicle, pollen, root or is constitutive  
CC in a plant cell. The plant is a cereal, e.g. soybean, alfalfa, sunflower,  
CC canola, cotton, peanut, tobacco or sugar beet, preferably maize, barley,  
CC sorghum, rice or wheat. The polynucleotides and the polypeptides they  
CC encode are useful for manipulating crop plants to alter or improve  
CC phenotypic characteristics, to produce large quantities of oil or  
CC proteins, to incur resistance to insecticides, viruses or fungi, and to  
CC incur stress tolerance (e.g. salt, cold or drought) to ensure the plants  
CC have a high nutritional value with reduced apical dominance or dwarfism,  
CC early flowering or altered metabolic pathways. This sequence represents a  
CC plant nucleic acid of the invention. Note: The sequence data for this  
CC patent did not form part of the printed specification but was obtained in  
CC electronic format directly from USPTO at [seqdata.uspto.gov/sequence.html](http://seqdata.uspto.gov/sequence.html).

XX
XX The present invention describes primer sets for synthesising 5602 full-
XX length cDNAs defined in the specification. Where a primer set comprises:
XX (a) an oligo-dT primer and an oligonucleotide complementary to the
XX complementary strand of a polynucleotide which comprises one of the 5602
XX nucleotide sequences defined in the specification, where the
XX oligonucleotide comprises at least 15 nucleotides; or (b) a combination
XX of an oligonucleotide comprising a sequence complementary to the
XX complementary strand of a polynucleotide which comprises a 5'-end
XX sequence and an oligonucleotide comprising a sequence complementary to a
XX polynucleotide which comprises a 3'-end sequence, where the
XX oligonucleotide comprises at least 15 nucleotides and the combination of
XX the 5'-end sequence/3'-end sequence is selected from those defined in the
XX specification. The primer sets can be used in antisense therapy and in
XX gene therapy. The primers are useful for synthesising polynucleotides,
XX particularly full-length cDNAs. The primers are also useful for the
XX detection and/or diagnosis of the abnormality of the proteins encoded by
XX the full-length cDNAs. The primers allow obtaining of the full-length
XX cDNAs easily without any specialised methods. AAH03166 to AAH13628 and

XX Novel human disease detection and treatment polypeptide, useful in  
PT diagnosis, prevention or treatment of cell proliferative disorders e.g.  
PT arteriosclerosis, cirrhosis and an autoimmune/inflammatory disorder e.g.  
PT AIDS.  
XX Claim 1; Page 381; 618pp; English.  
XX The invention relates to an isolated human disease detection and  
CC treatment (MDDT) polypeptide (I) selected from a polypeptide having a  
CC sequence selected from 254 sequences (ABP51231-ABP51484) given in the  
CC specification, a naturally occurring polypeptide comprising a sequence  
CC having at least 90% identity to (I) or a biologically active or  
CC immunogenic fragment of (I). (I) is useful for screening a compound for  
CC effectiveness as an agonist or antagonist, for screening a compound that  
CC specifically binds (I) or modulates the activity of (I), and for  
CC preparing a polyclonal or monoclonal antibody by hybridoma technology.  
CC Nucleic acids (II) (ABQ72449-ABQ72700) encoding (I) are useful for  
CC screening a compound for effectiveness in altering expression of a target  
CC polynucleotide comprising. Oligonucleotides and antibodies are useful for  
CC detecting MDDT in a sample or for assessing toxicity of a test compound,  
CC in a diagnostic test for a condition or a disease associated with the  
CC expression of MDDT in a biological sample, for detecting (I) in a sample,  
CC and for purifying (I) from a sample. A composition comprising (I), an  
CC agonist or antagonist is useful for treating a disease or condition  
CC associated with decreased or increased expression of functional MDDT. (I)  
CC or (II) are useful for diagnosing, treating or preventing disorders  
CC associated with aberrant expression of MDDT, where the disorders are  
CC selected from a cell proliferative disorder such as arteriosclerosis,  
CC cirrhosis, hepatitis, psoriasis, and cancer and an  
CC autoimmune/inflammatory disorder such as AIDS, Addison's disease,  
CC allergy, anaemia, asthma, atherosclerosis, gout, multiple sclerosis or

CC rheumatoid arthritis. (II) are useful for creating knockin humanised  
 CC animals or transgenic animals to model human diseases, in somatic or  
 CC germline gene therapy, to generate a transcript image of a tissue or cell  
 CC type, for detecting differences in the chromosomal location due to  
 CC translocation or inversion among normal, carrier or affected individuals  
 CC and as hybridisation probes for mapping naturally occurring genomic  
 CC sequences

CC The invention relates to novel genes (AAH68727-AAH73383) associated with  
CC cervical cancer with cytostatic activity. The nucleic acids and encoded  
CC polypeptides are useful: to assess if a patient is afflicted with  
CC cervical cancer or has a pre-malignant condition; to monitor the  
CC progression of cervical cancer or a premalignant condition in a patient;  
CC and to select and/or assess the efficacy of a compound or therapy for  
CC inhibiting cervical cancer in a patient. The nucleic acids may also be  
CC useful for gene therapy

XX New regulatory nucleic acid, useful for preparing transgenic plants with  
PT altered seed testa, provides specific expression of attached genes in  
PT seed endothelium and albumen.

XX Claim 1; Page 75-76; 85pp; French.

XX The present sequence represents a plant regulatory polynucleotide,  
CC comprising regulatory sequences that allow expression of a polynucleotide  
CC specifically in the endothelium and/or albumen of plant seeds. The  
CC present sequence was used to produce plasmid pBani. The regulatory  
CC polynucleotide, and derived expression cassettes or vectors, are used to  
CC produce transgenic plants in which development of seed testa is altered,  
CC especially for reducing the size or number of seeds, particularly  
CC complete absence of mature, fertile seeds, or modulating contents of  
CC flavonoids, tannins and cellulose (especially to produce maize and rape

CC seeds with less intense yellow colour, or to alter nutritional  
CC properties)

XX Novel nucleic acids and polypeptides, useful for treating disorders such  
PT as central nervous system injuries.

XX Claim 1; SEQ ID NO 1333; 10078pp; English.

XX The invention relates to human nucleic acids (AAI57798-AAI61369) and the  
CC encoded polypeptides (AAM38642-AAM42213) with nootropic,  
CC immunosuppressant and cytostatic activity. The polynucleotides are useful  
CC in gene therapy. A composition containing a polypeptide or polynucleotide  
CC of the invention may be used to treat diseases of the peripheral nervous  
CC system, such as peripheral nervous injuries, peripheral neuropathy and  
CC localised neuropathies and central nervous system diseases, such as  
CC Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic  
CC lateral sclerosis, and Shy-Drager Syndrome. Other uses include the  
CC utilisation of the activities such as: Immune system suppression,

CC Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic  
CC and thrombolytic activity, cancer diagnosis and therapy, drug screening,  
CC assays for receptor activity, arthritis and inflammation, leukaemias and  
CC C.N.S disorders. Note: The sequence data for this patent did not form  
CC part of the printed specification

XX PT New G-protein-coupled receptor-like polypeptides and polynucleotides,  
XX PT useful for treating diseases of ophthalmic, neurological, immunological  
XX PT and nephritic systems and hormonal dysfunction, cancer, atherosclerosis  
XX PT and diabetes.

XX PS Example 2; SEQ ID NO 1023; 92pp; English.

XX CC The invention describes an isolated polynucleotide (I) comprising a fully  
XX CC defined (S1) of 749, 3188, 2484, 1169, 2936, 1467, 5773, 5714, 4041,  
XX CC 1372, 3996, 3945, 2735, 1788, 585, 1782, 927, 5714 or 2282 nucleotides as  
XX CC given in the specification, its translated or protein coding portion, its  
XX CC extracellular portion or its active domain. The GPCR-like polypeptides  
XX CC and polynucleotides are useful for the treatment of diseases of  
XX CC ophthalmic, neurological, immunological and nephritic systems. They may  
XX CC also be used to treat hormonal dysfunction, cancer, atherosclerosis and  
XX CC diabetes. The antibodies are useful for detecting or quantitating the  
XX CC polypeptide in tissue. The polypeptides can also be used as molecular  
XX CC weight markers and as a food supplement. This sequence represents a human  
XX CC polynucleotide of the invention.

XX PT New polynucleotide, useful for treating diseases e.g., cancer or

XX PT neurodegenerative diseases.

XX PS Claim 1; SEQ ID NO 1023; 99pp; English.

XX CC The invention relates to a polynucleotide comprising a sequence given in  
XX CC the specification, or its mature protein-coding portion, or its  
XX CC complement. The polynucleotide is useful for treating diseases e.g.,  
XX CC cancer or neurodegenerative diseases and many others listed in the  
XX CC specification. The present sequence represents a novel human cDNA. Note:  
XX CC The sequence data for this patent did not form part of the printed  
XX CC specification but was obtained in electronic format directly from USPTO  
XX CC at seqdata.uspto.gov/sequence.html?DocID=20030104529.

/notes="Organ: Liver; Vector: pCNS-D2; Site 1: EcoRI;  
Site 2: NotI; The poly (A) + RNA was dephosphorylated with

bacterial alkaline phosphatase (BAP) and then decapped  
with tobacco acid pyrophosphatase (TAP). The decapped

intact mRNA was ligated with DNA-RNA linker including  
EcoRI site by treatment of T4 RNA ligase and the first

strand cDNA was synthesized from oligo dt-selected mRNA by  
priming with dt-tailed vector. The dt-tailed vector was

adjusted to have about 60nt. The cDNA vector was  
circularized with E. coli DNA ligase after digestion of

EcoRI which site is also included in vector. An RNA strand  
converted to a DNA strand by Okayama-Berg method. The

obtained cDNA vectors were used for transformation of  
competent cells E. coli Top10P' by electroporation method.

The cDNA libraries constructed by this method are  
full-length enriched cDNA library. After analyzing and

sequencing about 2,000 - 3,000 colonies in original cDNA  
library, the abundant cDNAs were selected and amplified by

PCR reaction using vector region primer including T7  
promotor as 5' primer and N(dt)14 as 3' primer. The PCR

products were used as template for synthesis of  
biotinylated single stranded RNA by in vitro transcription

reaction. The synthesized RNA probes were hybridized with  
antisense single stranded cDNAs prepared from original

library and incubated with avidin-gel. After removing  
DNA-RNA hybrids by centrifuge, the subtracted cDNA

libraries were constructed by transfection of the

```

```

              Site_2: NotI; The poly (A) + RNA was dephosphorylated with
              bacterial alkaline phosphatase (BAP) and then decapped
              with tobacco acid pyrophosphatase (TAP). The decapped
              intact mRNA was ligated with DNA-RNA linker including
              EcoRI site by treatment of T4 RNA ligase and the first
              strand cDNA was synthesized from oligo dt-selected mRNA by
              priming with dt-tailed vector. The dt-tailed vector was
              adjusted to have about 60nt. The cDNA vector was
              circularized with E. coli DNA ligase after digestion of
              EcoRI which site is also included in vector. An RNA strand
              converted to a DNA strand by Okayama-Berg method. The
              obtained cDNA vectors were used for transformation of
              competent cells E. coli Top10F by electroporation method.
              The cDNA libraries constructed by this method are
              full-length enriched cDNA library."

/notes="Organ: Stomach; Vector: pCNS; Site 1: EcoRI; Site 2: NotI; The poly (A)+ RNA was dephosphorylated with bacterial alkaline phosphatase (BAP) and then decapped with tabacco acid pyrophosphatase (TAP). The decapped intact mRNA was ligated with DNA-RNA linker including EcoR I site by treatment of T4 RNA ligase and the first strand cDNA was synthesized from oligo dt-selected mRNA by priming with dt-tailed vector. The dt-tailed vector was adjusted to have about 60nt. The cDNA vector was circularized with E. coli DNA ligase after digestion of EcoRI which site is also included in vector. An RNA strand converted to a DNA strand by Okayama-Berg method. The obtained cDNA vectors were used for transformation of competent cells E. coli Top10F by electroporation method. The cDNA libraries constructed by this method are full-length enriched cDNA library."

1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime  
end enriched, double-strand cDNA was digested with Not I and cloned  
into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library  
was normalized. Library was constructed by Life Technologies, a  
division of Invitrogen. This sequence belongs to sequence cluster  
6601.f

For more information about this cluster, see

TITLE Direct Submission

JOURNAL Submitted (20-JUL-2004) Genoscope - Centre National de Sequencage :

BP 191 91006 EVRY cedex - FRANCE (E-mail: seqref@genoscope.cns.fr)  
- Web : www.genoscope.cns.fr

COMMENT 1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library was normalized. Library was constructed by Life technologies, a division of invitrogen.

 musculus C57BL/6J (male) was obtained from the Jackson  
 Laboratory Mouse DNA Resource  
 (http://www.jax.org/resources/documents/dnares/). The DNA  
 was hydrodynamically sheared by repeated passage through a  
 0.005 inch orifice at constant velocity. The sheared DNA  
 was blunt end-repaired with T4 DNA polymerase and T4  
 polynucleotide kinase. Adaptor oligonucleotides were  
 ligated to the blunt ends in high molar excess. The  
 adaptor DNA was purified and size-selected for a 9.5 to  
 10.5 kb range using preparative agarose gel  
 electrophoresis. Vector DNA was prepared from a derivative  
 of pWD42 [Gill4732114|gb|AF129072.1], a copy-number  
 inducible derivative of plasmid R1. The vector was ligated  
 with adaptors complementary to the insert adaptors and  
 purified. The sheared, adaptor mouse DNA was annealed to  
 adaptor vector DNA, and transformed into  
 chemically-competent E. coli XL10-Gold (Stratagene) cells  
 and selected for ampicillin resistance."

 Clones are derived from the chimpanzee BAC library RPCI-43 This BAC  
 end was generated during the R&D process and may have higher chance  
 of clone tracking errors.

 /notes="Vector: PWD42nv; Purified genomic DNA from M. musculus C57BL/6J (male) was obtained from the Jackson Laboratory Mouse DNA Resource (http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polynucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptor DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of PWD42 (gi4732114|gb|AF129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptor mouse DNA was annealed to adaptor vector DNA, and transformed into chemically-competent E. coli XL10-Gold (Stratagene) cells and selected for ampicillin resistance."

 /note="Vector: pBluescript II SK (+) XR; Site 1: EcoRI (5'  
 end of cDNA); Site 2: XhoI (3' end of cDNA); Sapling trees  
 two metres in height and grown under greenhouse conditions  
 were exposed to continuous feeding by Malacosoma disstria  
 Hubner (forest tent caterpillar) mid-instar larvae caged  
 on the sapling using mesh bags. Mature leaves from within  
 the caged region were collected 2 hours, 12 hours, 24  
 hours and 48 hours after the onset of treatment. mRNA was  
 isolated from each tissue source independently and equal  
 quantities of mRNA from each tissue were then pooled. cDNA  
 was prepared from 5 micrograms of mRNA and vectorially  
 ligated into the pBluescript II SK (+) XR vector using the  
 pBluescript II XR cDNA Library Construction Kit according  
 to manufacturer's instructions with modifications  
 (Stratagene). Plasmid DNA was then transformed by  
 electroporation into DH10B cells (Invitrogen) for  
 propagation."

/notes="vector: pBluescript II SK (+) XR; Site 1: EcoRI (5' end of cDNA); Site 2: XhoI (3' end of cDNA); Cultured cells (de Sa MM et al. (1992) Plant Physiology 98:728-737) were grown in media (45mL) supplemented with either 50uM salicylic acid, 50uM benzothiadiazole, 50uM methyl jasmonate, 20uM chitosan or 200uL of Pollacia radiosa extract. Cells were harvested after a 3 hour treatment, along with untreated control cells. mRNA was isolated from each tissue source independently and equal quantities of mRNA from each tissue were then pooled. cDNA was prepared from 5 micrograms of mRNA and directionally ligated into the pBluescript II SK (+) XR vector using the pBluescript II XR cDNA Library Construction Kit according to manufacturer's instructions with modifications (Stratagene). Plasmid DNA was then transformed by electroporation into DH10B cells (Invitrogen) for propagation. Normalization was applied according to published methods [Bonaldo M.F. et al. (1996) Genome Research 6(9):791] in order to reduce the abundance of highly expressed transcripts."

/note="Vector: PWD42nv; Purified genomic DNA from M. musculus C57BL/6J (male) was obtained from the Jackson Laboratory Mouse DNA Resource (<http://www.jax.org/resources/documents/dnares/>). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polynucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptor DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pWD42 (G114732114|gb|AF129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptor mouse DNA was annealed to adaptor vector DNA, and transformed into chemically-competent E. coli XL10-Gold (Stratagene) cells and selected for ampicillin resistance."

JOURNAL  
 PUBMED  
 Submitted (14-APR-2004) Yoshihide Hayashizaki, The Institute of

Physical and Chemical Research (RIKEN), Laboratory for Genome  
 Exploration Research Group, RIKEN Genomic Sciences Center (GSC),  
 RIKEN Yokohama Institute; 1-7-22 Suehiro-cho, Tsurumi-ku, Yokohama,  
 Kanagawa, 230-0045, Japan (E-mail: genome-res@gsr.riken.jp,  
 URL: http://genome.gsc.riken.jp/, Tel: 81-45-503-9222,  
 Fax: 81-45-503-9216)

CDNA library was prepared and sequenced in Mouse Genome  
 Encyclopedia Project of Genome Exploration Research Group in Riken  
 Genomic Sciences Center and Genome Science Laboratory in RIKEN.  
 Division of Experimental Animal Research in Riken contributed to  
 prepare mouse tissues.

Tissues were provided by Dr. John Todd (Dept. of Medical Genetics  
 Wellcome Trust Centre for Molecular Mechanisms in Disease Wellcome  
 Trust/MRC building Addenbrookes Hospital Cambridge) whose  
 assistance we gratefully acknowledge.

Please visit our web site for further details.

Direct Submission

Submitted (14-APR-2004) Yoshihide Hayashizaki, The Institute of Physical and Chemical Research (RIKEN), Laboratory for Genome Exploration Research Group, RIKEN Genomic Sciences Center (GSC), RIKEN Yokohama Institute; 1-7-22 Suehiro-cho, Tsurumi-ku, Yokohama, Kanagawa, 230-0045, Japan (E-mail: genome-res@gs.riken.jp, URL: http://genome.gsc.riken.jp/, Tel: 81-45-503-9222, Fax: 81-45-503-9216)

cDNA library was prepared and sequenced in Mouse Genome Encyclopedia Project of Genome Exploration Research Group in Riken Genomic Sciences Center and Genome Science Laboratory in Riken Division of Experimental Animal Research in Riken contributed to prepare mouse tissues.

Tissues were provided by Dr. John Todd (Dept. of Medical Genetics Wellcome Trust Centre for Molecular Mechanisms in Disease Wellcome Trust/MRC building Addenbrookes Hospital Cambridge) whose assistance we gratefully acknowledge.

Please visit our web site for further details.
